

Training Manual

Our Philosophy...

is to support the success of the aesthetician and skin care technician by providing quality clinical skin care technologies and educational opportunities that produce a generous revenue stream and secure client retention, while providing the consumer with state-of-the-art, high performance products.

"Times Change...and So Does Your Skin"

Explore a unique and accurately targeted multi-dimensional line of hybrid peels, prescriptive treatments, and retail products featuring our cutting-edge technology: **Water Sealing Complex and Weightless System for Maximum Hydration, Anti-Inflammation, Anti-Oxidant Protection, and Extreme Penetration.**

Each treatment system is developed to work synergistically addressing all of life's changes including... **Lifestyle/Age /Weather /Health /Environment** Our line of hybrid peels and prescriptive customized mask treatments are created to initiate **collagen production/maximize results/and minimize inflammation.**

To support the benefits of the peels and prescriptive masks, **Dermodality Skin Solutions**, offers a unique pairing of retail products to extend and support treatment results. The retail products are tailored based on each individual's diverse environmental, lifestyle, age and health needs.

Dermodality Hybrid Chemical Peels

- Dermodality hybrid peels are designed for predictable results with little or no downtime.
- Having created industry-unique formulas.
- Dermodality hybrid peels do not use one single acid, but combinations of proven, topically applied acids that aid in the restoration and rejuvenation of the skin surface.
- By using a variety of acids, the peels are effective, minimize inflammation and nearly eliminate the risk for hyperpigmentation.
- Skin condition is affected by exposure to the sun and the elements, as well as adverse living habits.
- Chemical peels can improve acne scarring, sun-damage, age spots, freckles, fine lines, wrinkles, rough texture, and uneven pigmentation.
- Chemical peels can be performed on the neck, chest, hands, arms, shoulders, back, legs, etc.

WHAT IS A CHEMICAL PEEL?

Chemical Peels are topically applied acids that aid in the restoration and rejuvenation of the skin surface. Peels create a uniform and controlled shedding of several layers of the skin. Depending on the nature and depth of the peel, a significant number of layers can be exfoliated, stimulating new skin cell production and creating fresh vibrant appearance.

WHO ARE THE CANDIDATES?

This depends on skin type, Fitzpatrick scale level and the desired results, as well as which level of peel is most appropriate.

WHAT ARE THE BENEFITS OF A CHEMICAL PEEL?

Chemical peels can enhance the appearance of the skin by reducing blotchy and uneven pigmentation, fine lines and wrinkles, freckles, age spots, sun-damage and acne scars, in a relatively brief amount of time. Chemical peels accelerate the production of new skin cells revealing fresh smooth skin, immediately after the first treatment.

WHAT ARE THE SIDE EFFECTS?

Chemical peels are popular due to the many advantages and relatively low risk of complications. Side effects are rare, and usually temporary. Some potential side effects can include uneven pigmentation, redness, and (very infrequent) scarring if the skin is not appropriately pre-conditioned. Sun protection is critical to minimizing the risk of side effects. A customized home treatment program, including sun protection, will maintain the results of the peel.

Superficial Peel

Superficial peels are designed to smooth coarse, dry skin, improve texture, sun-damage, and improve uneven skin tone. Recovery is generally rapid and may involve some minor flaking. A series of treatments is recommended for optimum results, with little or no down time. Performing superficial peels in series can produce results similar to a medium or deep peel when the skin is properly pre-conditioned. Using the appropriate sun protection following treatment ensures regular activities can be resumed immediately.

Medium Peel

Medium peels are comprised of higher potency acids than the superficial peels. Medium peels target the epidermis and upper dermis and cause the skin to slough within 5 to 7 days. Immediately following treatment, the skin may appear red and is occasionally accompanied by swelling. Within a day, the skin turns brown in color, and after 3-4 days initiates the peeling process.

Fitzpatrick Scale

- I. Always Burns, Never Tans (*2-4 weeks pre-conditioning)
- II. Always Burns, Sometimes Tans (*2-4 weeks pre- conditioning)
- III. Sometimes Burns, Always Tans (*4-6 weeks pre-conditioning)
- IV. Rarely Burns, Always Tan (*6-8 weeks pre-conditioning)
- V. Moderately Pigmented (*8-10 weeks pre-conditioning)
- VI. Black Skin (*10-12 weeks pre-conditioning)

*Pre-conditioning is necessary for the use of Level 2 and 3 peels.
Listed below are each of the 2 groups.

Level 2 Peels:

- Long Island Ice Tea Peel (only exception)
- Blemish Acid Peel 20%
- Pure Retinol 20/20

Level 3 Peels:

- TCA Perfecting Peel -10% TCA /2% Mandelic
- TCA Pinnacle Peel – 15% TCA
- Modified Jessner 17% 17% 8%
- Jessner 17% 17% 17

PRE-Conditioning Treatment Preparation

The indications for a chemical peel are primarily cosmetic and thus should be tailored to each patient's specific concerns and wishes for aesthetic improvement of their skin, their ability to tolerate the post-procedural recovery period, and their Fitzpatrick skin type. A pre-conditioning home-care program needs to be established, evaluating the patient at the one-week intervals will help to ensure that the program is going well and to answer any questions.

- This home care program includes using a retinol mixer or HQ with Vit A serum to thin the top layer of the skin, increase cell turnover, and help the peel penetrate deeper into the skin.
- Patients that begin new homecare programs can have episodes of breakouts or irritation, which may cause the patient to discontinue the program.
- Typically, serums are discontinued at least a few days before the peel to prevent over-irritating the skin during the treatment.
- Patients with acne require attention to ensure their success. Facials, in combination with peels, for patients with acne help ensure a good relationship and a greater opportunity for success.
- Dermodality Peels as:
 - a) Pumpkin Peel 30%
 - b) Mandelic Acid 25% Peel
 - c) C-Vitality Peel
 - d) Intensive Brightening Peel

Are "indicating peels" and are used to pre-condition the skin for higher level and more intense treatments.
- These peels prepare the skin for the most common skin concerns, including anti-aging, hyperpigmentation and acne.
- As with all superficial peeling, pre-conditioning home-care programs are extraordinarily important.

PEEL APPLICATION

“The key to a successful peel is the peel application”

- Pre-peel skin care plan: Is your responsibly to educate your client to follow skin care plan before your peel to reduce side effects and make the peel more effective.
(see pre-conditioning treatment preparation page)
 - I. This can include using a retinol mixer or HQ with Vit A serum to thin the top layer of the skin, increase cell turnover, and help the peel penetrate deeper into the skin.
 - II. Typically, serums are discontinued at least a few days before the peel to prevent over-irritating the skin during the treatment.
- Chemical peel side effects: While everyone will experience some side effects from the peel, complications are more common among people with darker skin tones.
These include: redness and swelling, peeling, stinging or burning.
- Rare complications includes permanent darkening or lightening of the skin scarring or infection. Before you bring the patient into the room, double check that all the supplies you will need are on the counter.
- Make sure you have headband, the gauzes, the solution, and the fan.
- Make your back bar professional and organized, which will help you eliminate mistakes and perform as the professional that you are.
- Bring the patient into the treatment room, have him or her review and sign the consent form.
- Once this is accomplished and patient’s questions are answered, you are ready to begin the treatment.
- Make the patient comfortable on the bed, protect hair, and drape the chest with a towel.
- Using a mild cleanser clean the face until all of the makeup and debris has been removed.
- Next, de-fat the skin with Dermodality Pre-chemical Prep-pads; this process will take away most of the oils on the skin, allowing the peel solution to penetrate evenly and effectively.
- Next, dip the folded gauze into peel solution. Squeeze out any extra solution against the side of your medicine cup your gauze should not be dripping.

Mandelic Acid Peel

The name MANDELIC, is from the German word “Mandel” which means “almond” of which it is derived. Mandelic acid is now becoming a more popular alpha hydroxy acid (AHA) in skin care due to its multifunctionality, also gentler than other alpha hydroxy acids. The molecular weight of mandelic acid is larger than other AHA’s; this naturally-derived acid has a variety of medical, pharmacological and skin care uses.

Mandelic Acid Benefits:

- Anti-Bacterial
- Anti-Inflammatory
- Anti-Irritant
- Increase skin cell turnover
- Boost collagen production
- Reduces pigmentation,(including brown spots caused by the sun and aging)
- All skin types (from oily and acne prone to mature, sensitive and everything in between)
- Reduce appearance of fine lines

Blemish (SALICYLIC) Acid Peel

Blemish acid was originally extracted from the willow bark, and is still found in homeopathic remedies and skin care products as willow bark today. Blemish acid helps to correct the abnormal shedding of cells. For milder acne, blemish acid helps unclog pores to resolve and prevent lesions. It does not have any effect on sebum production and does not kill bacteria. It must be used continuously, just like benzoyl peroxide, because its effects stop when you stop using it pores clog up again and the acne returns. In fact, 20% salicylic acid is often considered the “gold standard” superficial peel for the treatment of acne and has demonstrated excellent clinical efficacy for the treatment of mild-to-moderate inflammatory acne and non- Inflammatory acne.

Blemish Acid Benefits:

- Anti-Bacterial
- Anti-Inflammatory
- Reduce spots and bumps associated with acne.

SKIN RESPONSE TO BLEMISH ACID PEELS

The skin will be red and sometimes have a veil of salicylate on the surface. This appearance may resemble a frost; but unlike a frost, it can actually be moved, whereas a true frost cannot. In some cases, the skin will have a temporary anesthesia effect. In other words, the skin will be numb from the peel. When the time for the skin to start peeling begins the skin will usually peel in sheets or big “chunks” with this solution, beginning, of course, around the mouth. Once the peel is complete, apply sunscreen before discharging the patient.

AFTER THE TREATMENT

The post treatment for blemish acid peel is simple. Use an anti- inflammatory product to reduce the stinging and burning, if any exists. The skin should be kept soft with a product that is specifically designed for post peeling. On the day of the peel and for the healing time, the patient should avoid any therapeutic home-care products. These products may be too irritating and may cause the skin to become erythemic and sensitive.

THE TRICHLOROACETIC (TCA) ACID PEEL

(TCA) has been used as a peeling agent for medical skin treatments since the early 1980's. Many physicians and esthetician hold TCA as "the gold standard" in peeling agents and is able to treat every skin type, issue and coloration. It can be used superficially in very mild percentages (10%-20%), and also for medium depth peels (up to 35% *Doctor Office only).

TCA Benefits:

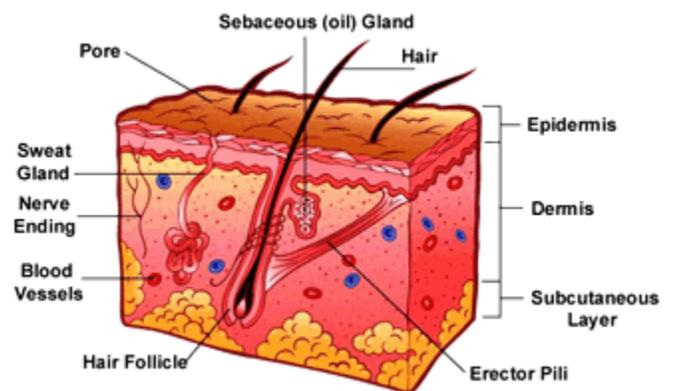

- Improved skin tone.
- Texture and clarity.
- Reduction of acne, clogged pores.
- Reduce wrinkles and fine lines.
- Increase in collagen and elastin production.
- Gradually removing unwanted freckles, tattoos and scars.
- Pigmentation irregularities (Melasma)
- Sun damaged.

SKIN RESPONSE TO TCA ACID PEELS

The mechanism of TCA injury is protein coagulated in the dermis and epidermis. Done incorrectly, the peel will not perform as expected, creating a result that is either too deep or too light. The concentration of the solution you are using is not as important as the number of coats you apply; the more coats, the deeper the peel will be.

AFTER THE TREATMENT

The post treatment for TCA acid peel is simple. Use an anti-inflammatory product to reduce the stinging and burning, if any exists. The skin should be kept soft with a product that is specifically designed for post peeling. On the day of the peel and for the healing time, the patient should avoid any therapeutic home-care products. These products may be too irritating and may cause the skin to become erythemic and sensitive.

JESSNER AND MODIFY JESSNER PEELS

A Jessner peel is a mild cosmetic peel to treat can be quite dramatic, especially for patients with acne-prone or hyper pigmented skin. This is a progressive treatment and for maximum results should be performed in a series. One treatment will not provide the long-term desired result. The frequency of treatment will depend on the depth of the peel and the duration of the peeling process. Most patients will not tolerate continual sloughing over an extended period. Schedule individual peels and peel series accordingly to ensure patient compliance and desired results. The Jessner Peel was designed to remove superficial layers of skin. Modified Jessner's solution is safely and effectively reduces melasma and pigment imperfections in darker skin. . Jessner solution cannot be neutralized; it can only be diluted. Be sure the number of coats applied are appropriate for the intended result.

Benefit of Jessner Peel and Modify Jessner:

- Dry out active acne, dislodge blackheads.
- Reduce dark patches, age spots and sun-damaged.
- Even out skin tone
- Smooth fine lines and shallow wrinkling and scarring,
- Treat melasma (skin discoloration)

Pre-peel skin care plan: Is your responsibly to educate your client to follow a skin care plan before your peel to reduce side effects and make the peel more effective. (see pre-conditioning treatment preparation page) This can include using a retinol mixer or HQ with Vit A serum to thin the top layer of the skin, increase cell turnover, and help the peel penetrate deeper into the skin. Typically, serums are discontinued at least a few days before the peel to prevent over-irritating the skin during the treatment.

Chemical peel side effects: While everyone will experience some side effects from the peel, complications are more common among people with darker skin tones. These include: redness and swelling, peeling, stinging or burning.

Rare complications include: permanent darkening or lightening of the skin scarring or infection.

WHAT IS A CHEMICAL FROSTING?

- Frosting is a phenomenon seen with Jessner peels, Salicylic peels, and TCA peels.
- Frosting occurs when the peel solution reacts with the major protein of the epidermis (keratin), precipitating the protein and forming frost.
- The frost can be challenging to identify. Watch for pinkness to turn red, which should then be followed by a white haze.
- A salicylate or crystallization of the peeling products may some-times appear on the skin, this is not a frost. If the whiteness can be wiped off, it is not a frost.
- You may need to wait up to five minutes for a frost to occur with Jessner solution.
- Frosting will usually occur in the thinnest skin first: around the eyes, for example, or in the driest areas such as on the upper lip.
- If the skin is significantly sun damaged or the proper home or clinical preparations have not been made, the solution may repel and bead up on the skin. In this case, the solution can be massaged with gloved hands or rough gauze to encourage penetration.

Dermodality Pre-Conditioning System

Dermodality proprietary pre-conditioning system is the process of preparing the skin prior to any chemical peel treatment, providing predictable and successful outcomes. Pre-conditioning reduces the risk of hyperpigmentation, while refining texture and improving fine lines and wrinkles. The better the skin is prepared for treatment, the better the treatment result. This is why it is so important.

- You may **not** start a series of level 2 and 3 chemical peels before our proper pre-conditioning strategies have been applied. **No exceptions.**
- Home Care/**Pre-Conditioning** products for chemical peels are **Mandatory required** and include:
 1. HQ Lightening Gel and Vitamin A: Intense (mixed or applied individually) pm
 2. Or HQ/Retinol Mixer.
 3. Vitamin C: Intense can be used to blend with Vitamin A: Intense
 4. or the HQ/Retinol Mixer.

Without the use of each of the above ingredients, you will greatly increase the risk of pigmentation and uneven peeling.

- The longer you “prep” the skin the better the results. At home the use

I. Vitamin A: Intense

II. HQ Lightening Gel (inhibit & suppress melanin)

OR

III. Retinol mixer (inhibit & suppress melanin)

Stimulating cell growth (thickening the dermis) while properly and safely reducing the Stratum Corneum.

The result is, the longer you use post treatment products is the greater you reduce the risk of pigmentation while evening the texture of the surface providing a more even exfoliation.

- Dermodality Professional pre-conditioning treatment system must include: Pumpkin Peel 30, Retinol, C: Vitality Peel, Intensive Brightening Peel (pigmentation concerns) Mandelic Peel (acne concerns maximum peel per week or bi-Monthly. Progressing into the choice of Pure Retinol 10/10, Long Island Ice tea Peel (Pure Retinol 15/15) or Pure Retinol 20/20.

* **Home usage:** PM – every other day until skin is acclimated. Apply 2 to 3 drops of hq Lightening Gel and or Vitamin A: Intense all-over the face, and neck and even chest if you’re planning on doing that area; extra on dark areas – Always finish with SunMoist SPF 30.

* **Note:** When using HQ/Retinol Mixer, you are selecting clients with less sensitive or thicker skin types. Use in the same manner listed above for HQ and Vitamin A: Intense.

Dermodality Points of Understanding

Selection of Peel Concentration and Timing

To achieve a successful peel, it is important to monitor carefully the condition of the client's skin during the procedure. Note: cold or dry weather may enhance skin reactivity.

A peel may need to be terminated more quickly in the summer compared to cooler seasons.

Side Effect of a Superficial Peel

Clients may experience the following sensations and conditions following a peel procedure: Redness (erythema), stinging, itching, burning, tightness, minor swelling and peeling of the superficial layer of skin. These sensations gradually diminish over the course of a week.

Superficial peels may also cause peri-oral dermatitis, and acne flare ups, or a herpes simplex flare ups (particularly if no prophylactic antiviral treatment is indicated).

Some clients may experience hyper- or hypopigmentation after a superficial peel. If left untreated, these conditions generally resolve with time. However, hypopigmentation responses may take longer to resolve and may be permanent. Peeling should not be repeated on patients having unresolved changes in pigmentation.

WARNING: If the peel is left on the skin for longer than the recommended treatment time or goes too deep, potential side effects may include:

- Moderate to severe erythema
- Epidermolysis
- Post inflammatory hyper- or hypopigmentation
- Blistering and peel
- Scarring
- Sun Sensitivity

Contraindications

- Rosacea
- Accutane (must be off for 6 months)
- Pregnancy or Lactating
- Active cyst/Acne
- Cold sores
- Drugs that cause photosensitivity (not always the case for superficial peels)
- Clients that are not using blocks or SPF daily
- Retin A (**need to be off of Retin A for 1 week prior to your first chemical peel**)
- Recent plastic surgery or recent medical procedures
- Open lesions
- Sunburn

Drugs That Cause Photosensitivity

Anticancer Drugs	Anti Depressants	Antihypertensives
Dacarbazine (DTIC-Dome) Fluororacil (Fluoroplex) Flutamide (Eulexin) Methotrexate (Folex) Vinblastine (Velban)	Amitriptyline (Elavil) Amoxapine (Asedin) Clomipramine (Anafranil) Desipramine (Norpramin) Doxepin (Adapine) Imipramine (Tofranil) Maprotiline (Ludiomil)	Captopril (Carpoten) Diltiazem (Cardizem) Methyldopa (Aldomet) Minoxidil (Loniten) Nifedipine (Procardia)
Antihistamines	Nortriptyline (Aventyl) Phenelzine (Nardil) Protriptyline (Vivactil) Trazodone (Desyrel) Trimipramine (Surmontil)	Antiparasitic
Cyproheptadine (Periacton) Diphenhydramine (Benadryl)		Chloroquine (Aralene) Quinine Thiabendazole (Mintezol)
Antimicrobials	Antipsychotic	Diuretics
Ciprofloxacin (Cipro) Clofazimine (Lamprene) Dapsone Demeclocycline (Declamyan) Dnnoxacin (Penetrex) Flucytosine (Ancobon) Griseofulvin (Maxaquin) Minocycline (Minocine) Nalidixic Acid (NegGram) Narfloxacin (Noroxin) Ofloxacin (Floxin) Oxytetracycline (Terramycin) Pyrazinamide Sulfonamides Tetracycline (Achromycin) Timethoprim (Proloprim)	Chlorpromazine (Thorazine) Fluphenazine (Permitil) Haloperidol (Haldol) Perphenazine (Trilafon) Prochlorperazine (Compazine) Thiorodazine (Mellaril) Thiothixane (Navane) Trifluoperazine (Stelazine) Thiflupromazine (Vesprin)	Acetazolamide (Diamox) Amiloride (Midamor) Bendroflumethiazide (Naturetine) Benzthiazide (Exna) Chlorothiazide (Diyril) Furosemide (Lasix) Hydrochlorothiazide (Diyardin, Salnon) Methclothiazide (Aquatensey)

Dermodality Chemical Peel & Layering Guidelines

Guidelines designed to help correct the following:

- Hyperpigmentation - Melasma and Superficial Pigmentation
- Acne/Acne Prone Skin
- Wrinkles
- Uneven Skin Texture and appearance
- Acne Scarring

Begin treatments by pre-conditioning skin based on Fitzpatrick Skin Type

- Pre-conditioning must begin at the time of the first superficial peel, no exceptions.
- Follow pre-conditioning methods explained in this manual.

TREATMENT PROCESS: 3 CHEMICAL PEELS 6 to 9 weeks apart.

The treatment cycle will be determined by the skin's response to each peel and the desired results. If the skin is highly sensitized by the chemical peel a longer period between treatments will be required.

Skin must be pre-conditioned a minimum of 4 weeks before beginning the chemical peel process (use Fitzpatrick scale as a guide).

First Treatment: Includes one of the Dermodality Pure Retinol Peels. With the completion of each chemical peel, the skin becomes brighter with more even texture. In the case of hyperpigmentation and/or acne scarring, a noticeable visual change will be seen with this protocol. The skin will begin tightening almost immediately, and pores will appear significantly smaller. This step is important to understanding the skin response and level of sensitivity.

1 week post treatment follow up - Strongly recommend:

- * Dermodality Prescription System Facial – 7-10 days post chemical peel treatment.
- * 1-week post peel follow up and treatment helps determine treatment strategy going forward

TOTAL OF 3 CHEMICAL PEEL TREATMENTS at 3-4 WEEK INTERVALS

Maintenance Program – 4 to 6-week post peel series:

- Treat with Prescription System facials 3-4 weeks apart
- Include extractions
- No chemical peels during the maintenance period

If further treatment is needed after initial series of 3 treatments:

- Resume a modified skin rejuvenation peel program
- An additional series of 3 peels is recommended
- Follow up post treatment care ensures desired results

SYMBOL SYSTEM

Determining what products is the best to address specific skin concerns can be a challenge and Dermodality has resolved this by developing a system identifying the appropriate product choice for each skin condition(s).

Professional :

For professionals to have complete control of treatments

Anti-Aging

Lightening & Brighten

Blemish Control Pigmentation

Pigmentation

PC1 PC2 PC3

Pre-Condition

Home Care :

For before, during, and after treatments

Pre-conditioning and daily maintenance

Anti-Aging:

- Corrects without flaking, redness, or irritation
- Supports collagen production
- Minimizes dark spots and brightens skin
- Uses latest technology to help firm skin, reduce lines and wrinkles

Brightening

- Specific ingredients minimize dark spots and brighten skin
- Mandelic acid helps control inflammation, the potential cause of pigment issues
- Vitamin C and Vitamin A brighten skin

Hydrating

- Exclusive peptide-rich hydrating formulas
- Replenishes moisture barrier
- Light, non-greasy formulations
- Skin feels moist, tighter and lifted
- Unique penetrating ingredients support moisture levels
- Hydrating agents help skin feel soft and smooth
-

Anti-Blemish

- Proven ingredients to clear blemishes
- Balances oily skin without dryness
- Mandelic acid decongests and calms skin
- Skin is clearer, smooth, and hydrated

Sensitive Skin

- Minimizes redness and irritation
- Helps soothe and calm sensitive skin
- Antioxidants and vitamins restore healthy skin
- Hydrating agents help skin feel soft and smooth

Consultation Forms

Dermodality Post-Peel Care

Directions:

1. Cleanse with Foam Cleanser or Mandelic & Green Tea Facial Cleanser.
2. Dry/sensitized skin apply Aloe-sona Anti-inflammatory cream.
3. If skin becomes burned or highly sensitized, use Aquaphor.
4. AM all clients must use SunMoist SPF 30.
5. Skin may feel dry & flaky for several days.
6. Mineral powder or mineral make-up may be used next day.
7. No Liquid or cream make-up for 1 week after a level 1 or 2 peel.

Clients are advised to avoid the following to promote healing:

- Products containing AHA's
- Salicylic Acid
- Lactic acid
- Retinoids (Retin-A), Vitamin A, until the skin returns to normal condition
- Pumpkin Peel or any level 1 peel
- The use of abrasive or exfoliating sponges
- Sun exposure
- Artificial tanning devices
- Direct heat sources until the skin is fully healed.

FOR ONE WEEK, DO NOT:

- Have a facial during the healing process
- Peel the skin
- Pick the skin
- Scrape the skin
- Use a mask
- Use an active moisturizer
- Have any waxing services
- Rub the skin
- Have any electrolysis
- Use any depilatories
- Use a loofah
- Color Hair
- Use Liquid make-up for 1 week (use micronized mineral make-up)
- No Permanent make-up for a week
- Protect client's Permanent make-up with Vaseline
- Do not work out
- Do not go into hot tub
- Do not drink alcohol for 3 days after chemical peel

Please sign that you have read and understand post care instructions:

HOW TO TAKE BEFORE & AFTER PICTURES :

CHECKLIST:

- Get written consent from client
- Remove client's makeup if applicable
- Move hair behind ears and out of face
- Take image of client in front of blank wall (no distracting backdrops)
- Create same lightening scenario (either on or flash off depending on natural light)
- Keep face angle as similar as possible preferably face on (do not take one image from 19m high above and one image from below)

- Not getting consent from client
- Taking photos in different lights or angles (this may falsely give perception of image not being of the same person)
- Not taking makeup of
- One image uses flash the other uses a natural light
- A void using a filter or any form of editing - this is false advertising and unethical!
- Avoid using a low resolution or blurry image

Dermodality Facial Documentation Chart

Dermodality Procedure Informed Consent

I, _____, consent to the treatment known as a superficial chemical peel. The treatment has been explained to me and I have had the opportunity to ask questions. I understand that the procedure may cause swelling or puffiness of my face or _____ (body site treated) that may be uncomfortable. The procedure may cause my skin to appear red and peel like a sunburn. During and after the procedure, the following may be experienced: redness, stinging, itching, burning, mild pain, tightness, peeling and scabbing of superficial layers of the skin. These sensations will gradually diminish over the course of a week as the skin returns to normal. Some clients may react differently. In severe cases the skin may turn very red. The skin may be uncomfortable and look like a very bad sunburn. The peeling usually last about three to seven days, although it may last longer. Some only flake a little but will still get great rejuvenating results.

I understand that there is risk of developing temporary or permanent pigment (color) change in the skin. There is also a small incidence of flare of acne-like lesions after the peel. There is a rare incidence of scarring and infection. I have been given a copy of the post-peel instructions and have reviewed them.

Dermodality™ Skin Rejuvenation Program Worksheet

1st Chemical Peel

Notes: _____

Retail Treatment Skin-description: _____

2nd Chemical Pee

Notes: _____

Retail Treatment Skin- description: _____

3rd Chemical Peel (if needed)

Notes: _____

Retail Treatment Skin- description: _____

- With the completion of each chemical peel, the surface of the skin will change. The skin care provider will determine what form of home care/facial/treatment that best supports the skin needs. (Recommended: Dermodality home care and prescriptive system treatments).

If you need to continue treatments Re-start a modified skin rejuvenation program until skin is completed healed

Dermodality Skin History and Analysis

NAME: _____ DATE: _____ AGE: _____

How do you rate your skin?

_____ OILY
_____ NORMAL
_____ DRY
_____ COMBINATION
_____ SENSITIVE

Check all that apply now (or previously) to you skin?

_____ ACNE
_____ ACNE SCARRING
_____ SCARRING
_____ PIGMENTATION
_____ ENLARGED PORES
_____ BROKEN CAPILLARIES (list where) _____ :
_____ WRINKLES (list where): _____

List any allergies: _____

Have you ever seen a Doctor for your skin? _____

Have you/are you using RX Products or Medications such as Accutane, Birth Control, Pill or hormones? List: _____

Have you/are you using Retin-A (circle) YES NO For how long? _____

What concentration? (circle) .1% .05% .025%

Are you pregnant or lactating? (circle) YES Due date: NO N/A

You are actively trying to get pregnant? YES, NO

During pregnancy did you develop "masking" or hyperpigmentation? (circle) YES, Where?
NO N/A

What type of FACIAL CLEANSER do you use? _____ SOAP _____

GEL CREAM/MILKY _____ OTHER (list): _____

What type of TONER/ASTRIGENT do you use? List all: _____ other _____

Do you use FACIAL SCRUBS: YES NO BUFF-PUFF/LOOFAH: YES NO

HOT WATER ON FACE: YES NO

FACIAL DEPILATORIES OR HOT WAX: YES NO

ELECTROLYSIS: YES NO

Does your skin ever feel tight or flaky? (circle) YES NO SOMETIMES

..... ever appear shiny a few hours after cleansing? YES NO SOMETIMES

..... break out? YES NO SOMETIMES

Do you get cold sores and/or fever blisters on the lips/face? Yes No

If yes, how often? _____

Do you burn due to sun exposure? YES NO Do you tan easily? YES, NO

Have you used a tanning bed? Do you currently sunbathe? YES NO How often? _____

Describe your: History of sun exposure _____ History of Skin Cancer (date, type, location)

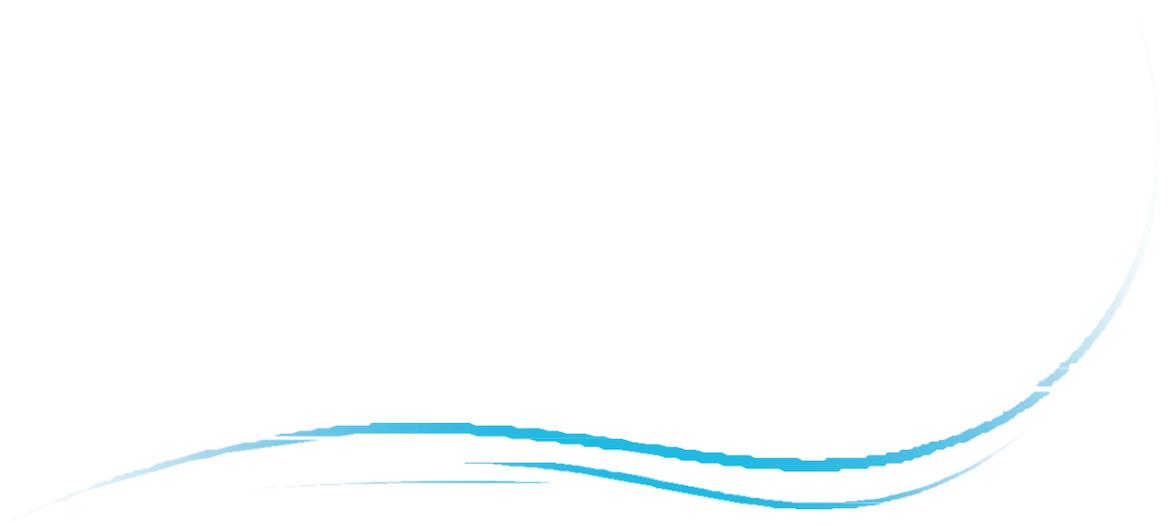

How Often do you use sun screen? _____ Brand: _____ SPF _____ Chemical/ Physical

What other areas do you want to treat? NECK CHEST HANDS OTHER

What changes would you like to see with your skin? _____

Protocols

Dermodality Protocols

Rated by Level of Intensity

Level 1

1. Pure Mandelic Acid 25%
2. C: Vitality Solution 25% AHA
3. Pumpkin Peel 30 – pH 3.1
4. Pure Mandelic 25% with Pumpkin Peel 30
5. Intensive Brightening Peel 45
6. C: Vitality 25% with Pumpkin Peel 30
7. Intensive Brightening Peel 45 with Pumpkin Peel 30
8. Retinol 10/10 – (10% Pure Refined Retinol with 10% Lactic Acid – pH 2.2)
9. Pumpkin Peel 30 (removed) –with Pure Retinol 10/10

Level 2

1. Pure Retinol 15/15 “Long Island Ice Tea” Peel
2. Pumpkin Peel 30 (removed) – then Retinol 15/15 “Long Island Ice Tea” Peel
3. Pure Retinol 20/20
4. Pumpkin Peel 30 (removed) then Pure Retinol 20/20
5. Blemish Acid Solution 20%
6. Blemish Acid Peel Treatment –with Pure Retinol 15/15 “Long Island Ice Tea”

Level 3

1. TCA Perfecting Peel - 10% TCA/5% Mandelic Acid
2. Pumpkin Peel 30 (removed) then TCA Perfecting Peel
3. TCA Perfecting Peel with Retinol 10/10
4. TCA Perfecting Peel – Then Pure Retinol 15/15 “Long Island Ice Tea” Peel
5. TCA Perfecting Peel – Then Pure Retinol 20/20 Peel
6. Pumpkin Peel 30 (removed) with TCA Perfecting Peel
7. TCA Perfecting Peel - with Pure Retinol 15/15 “Long Island Ice Tea “
8. Pumpkin Peel 30 (removed) - Then TCA Perfecting Peel – Then Retinol 15/15 “Long island Ice Tea”
9. Modified Jessner Peel
10. Modified Jessner Peel - Then Pure Retinol 15/15 “Long Island Ice Tea” Peel
11. Jessner Peel

Pumpkin Peel 30% Treatment

LEVEL 1

Pre-Peel Procedure: Prepare the Skin

1. Secure hair off face.
2. Remove contact lenses.
3. Thoroughly cleanse the skin using a Dermodality Mandelic Green Tea Cleanser to remove any residual skin debris, make-up and surface oils.
4. Prep with Dermodality 50/50 Peel Prep Pads, wipe face several times and fan until dry.
5. Using a small cotton-tipped applicator, apply petrolatum lightly to any cuts or abrasions and other areas in which the peel solution may pool to protect these areas during the peel procedure.
6. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure.

Pumpkin Peel 30% - 3.2 pH, 10% Glycolic Acid, 20% Lactic Acid

1. Measure 1 tablespoon of **Pumpkin Peel 30%**
2. Apply Pumpkin Peel 30% with fan brush starting with the thicker areas of the face. Proceed in the following order: Forehead, chin, facial perimeter, cheeks, nose, temples and around eyes area.
3. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure
4. Leave on the face for 10 minutes or if ***erythema (redness) appears then remove***.
5. Remove product with cool towel until clean. Note that there is *No Noticeable Erythema*. If stinging occurs, use cold compresses until stinging subsides.
6. Fan skin until dry.
7. Apply Moisture Soothe Plus (if needed) followed by SunMoist SPF 30.

Intensive Brightening Peel AHA's 45% Plus

LEVEL 1

Pre-Peel Procedure: Prepare the Skin

1. Secure hair off face.
2. Remove contact lenses.
3. Thoroughly cleanse the skin using a Dermodality Mandelic Green Tea Cleanser to remove any residual skin debris, make-up and surface oils.
4. Prep with Dermodality 50/50 Peel Prep Pads, wipe face several times and fan until dry.
5. Using a small cotton-tipped applicator, apply petrolatum lightly to any cuts or abrasions and other areas in which the peel solution may pool to protect these areas during the peel procedure.
6. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure.

Intensive Brightening Peel AHA's 45% Plus - 3.0 pH

Kojic, Mandelic, Glycolic, Salicylic, L-ascorbic Acids

1. Measure 1cc of **Intensive Brightening Peel AHA's 45% Plus** into a small glass bowl.
2. Apply **Intensive Brightening Peel AHA's 45% Plus** with fan brush, starting with the thicker areas of the face. Proceed in the following order: Forehead, chin, facial perimeter, cheeks, nose, temples and around eyes.
3. Place a fan about two feet from the client's face to cool skin and reduce discomfort during the peel procedure,
4. Allow **Intensive Brightening Peel AHA's 45% Plus** to absorb into the skin for up to 10 minutes, ***unless erythema (redness) occurs***. If redness occurs, remove immediately.
5. After 7-10 minutes, remove product with cool cloths. Repeat several times until clean, making sure that there is ***No Noticeable Erythema***.
6. If stinging occurs use cool compresses until stinging subsides.
7. Fan skin until dry.
8. Apply Moisture Soothe Plus (if needed) followed by SunMoist SPF 30.

Pure Retinol 10/10

LEVEL 1

Pre-Peel Procedure: Prepare the Skin

1. Thoroughly cleanse skin using a mild cleanser, as in Dermodality Mandelic Green Tea Cleanser to remove residual skin debris, make-up and surface oils.
2. Prep with Dermodality 50/50 Peel Prep Pads. Repeat several times for good coverage and fan until dry
3. In a clear glass dish, pour 2cc's (12 pumps = approx. 2cc) of Retinol 10-10
4. With a 4 x 4 non-woven gauze pad apply product over face
5. Fan skin and wait 5 to 10 minutes
6. Apply 2nd application, add an additional 2cc's of Retinol 10-10 (total of 4cc's). Dry with fan, wait 10 minutes
7. Blot and remove excess Retinol 10/10 solution
8. If sensitivity or elevated erythema (redness), apply cool (compresses) until redness subsides
9. Apply DERModality™ Moisture Soothe Plus (anti-inflammatory cream)
10. Apply DERModality™ SPF 30 SunMoist Sunblock
11. If no sensitivity or erythema (redness) have client wear treatment home and cleanse at night before bed time.

25% Mandelic Acid Peel/ Pure Retinol 10/10 Protocol

LEVEL 1

Pre-Peel Procedure: Prepare the Skin

1. Secure hair off face.
2. Remove contact lenses.
3. Thoroughly cleanse the skin using a Dermodality Mandelic Green Tea Cleanser to remove any residual skin debris, make-up and surface oils.
4. Prep with Dermodality 50/50 Peel Prep Pads, wipe face several times and fan until dry.
5. Using a small cotton-tipped applicator, apply petrolatum lightly to any cuts or abrasions and other areas in which the peel solution may pool to protect these areas during the peel procedure.
6. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure.

Mandelic Acid Peel 25% AHA – 3.0pH

25% Mandelic Acid, 10% Lactic Acid, 2%, Salicylic Acid, 2% L-Ascorbic Acid

1. Measure 1cc of **Mandelic Acid 25% AHA Peel** into a small glass bowl
2. Apply **Mandelic Acid 25% AHA Peel** with fan brush starting with the thicker areas of the skin.
Proceed in the following order: Forehead, chin, facial perimeter, cheeks, nose, temples and around eyes.
3. Place a fan about two feet from the client's face to cool skin and reduce discomfort during the peel procedure,
4. Allow **Mandelic Acid 25% AHA Peel** to absorb into the skin ***unless erythema (redness) occurs***. If redness occurs, proceed to step #5.
5. Remove product with cool compresses repeating several times until clean. Note that there is *No Noticeable Erythema*. Do Not Apply Retinol 10/10 if redness is present.
6. Apply Pre Prep Pads
7. Apply Pure Retinol 10/10

CONTINUED....

Pure Retinol 10/10 Application

1. In a clear glass dish, pour 2cc's (4-5 pumps = approx. 2cc) of Retinol 10-10
2. With a fan brush, gloved hand or 4 x 4 non-woven gauze pad apply product over face
3. Fan skin and wait 5 to 10 minutes
4. Apply 2nd application, add an additional 2cc's of Retinol 10-10 (total of 4cc's). Dry with fan, wait 10 minutes
5. Blot and remove excess Retinol 10/10 solution
6. If sensitivity or elevated erythema (redness), apply cool (compresses) until redness subsides
7. Apply Moisture Soothe Plus (if needed)
8. Apply SunMoist
9. If no sensitivity or erythema (redness) have client wear treatment home and cleanse after 5 hours or at night before bedtime

Intensive Brightening Peel AHA's 45% Plus/ Pure Retinol 10/10 Protocol

LEVEL 1

Pre-Peel Procedure: Prepare the Skin

1. Secure hair off face.
2. Remove contact lenses.
3. Thoroughly cleanse the skin using a Dermodality Mandelic Green Tea Cleanser to remove any residual skin debris, make-up and surface oils.
4. Prep with Dermodality 50/50 Peel Prep Pads, wipe face several times and fan until dry.
5. Using a small cotton-tipped applicator, apply petrolatum lightly to any cuts or abrasions and other areas in which the peel solution may pool to protect these areas during the peel procedure.
6. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure.

Intensive Brightening Peel AHA's 45% Plus - 3.0 pH

Kojic, Mandelic, Glycolic, Salicylic, L-ascorbic Acids

1. Measure 1cc of **Intensive Brightening Peel AHA's 45% Plus** into a small glass bowl
2. Apply **Intensive Brightening Peel AHA's 45% Plus** with fan brush starting with the thicker areas of the skin. Proceed in the following order: Forehead, chin, facial perimeter, cheeks, nose, temples and around eyes.
3. Place a fan about two feet from the client's face to cool skin and reduce discomfort during the peel procedure,
4. Allow **Intensive Brightening Peel AHA's 45% Plus** to absorb into the skin ***unless erythema (redness) occurs***. If redness occurs, proceed to step #5.
5. If no redness or stinging occurs, fan skin for 5 minutes and proceed to application of Pumpkin Peel 30%.

CONTINUED....

Pure Retinol 10/10 Application

1. In a clear glass dish, pour 2cc's (4-5 pumps = approx. 2cc) of Retinol 10-10
2. With a fan brush, gloved hand or 4 x 4 non-woven gauze pad apply product over face
3. Fan skin and wait 5 to 10 minutes
4. Apply 2nd application, add an additional 2cc's of Retinol 10-10 (total of 4cc's). Dry with fan, wait 10 minutes
5. Blot and remove excess Retinol 10/10 solution
6. If sensitivity or elevated erythema (redness), apply cool (compresses) until redness subsides
7. Apply Moisture Soothe Plus (if needed)
8. Apply SunMoist SPF 30
9. If no sensitivity or erythema (redness) have client wear treatment home and cleanse after 5 hours or at night before bedtime

Level 2/3 Peel Protocols

Pure Retinol 15/15 “Long Island Ice Tea”

Pre-Peel Procedure: Prepare the Skin

1. Secure hair off face.
2. Remove contact lenses.
3. Thoroughly cleanse the skin using a Dermodality Mandelic Green Tea Cleanser to remove any residual skin debris, make-up and surface oils.
4. Prep with Dermodality 50/50 Peel Prep Pads, wipe face several times and fan until dry.
5. Using a small cotton-tipped applicator, apply petrolatum lightly to any cuts or abrasions and other areas in which the peel solution may pool to protect these areas during the peel procedure.
6. Place a fan about two feet from the client’s face to help keep the skin cool and reduce discomfort during the peel procedure.

Pure Retinol 15/15 “Long Island Ice Tea” Application

1. In a clear glass dish, pour 2cc’s (4-5 pumps = approx. 2cc) of Retinol 15-15
2. With a fan brush, gloved hand or 4 x 4 non-woven gauze pad apply product over face
3. Fan skin and wait 5 to 10 minutes
4. Apply 2nd application, add an additional 2cc’s of Retinol 15-15 (total of 4cc’s).
5. Dry with fan, wait 10 minutes
6. Blot and remove excess Retinol 15/15 solution
7. If sensitivity or elevated erythema (redness), apply cool (compresses) until redness subsides
8. Apply Moisture Soothe Plus (if needed).
9. Apply SunMoist SPF 30
10. Client will wash off solution at home in 3-5 hours or before bedtime. **DO NOT SLEEP WITH CHEMICAL**

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitive

Pumpkin Peel 30 – Retinol 15/15 “Long Island Ice Tea” Double Layer Peel

THIS IS NOT A PEEL FOR A FIRST-TIME CLIENT

Cause & Effect

Minimal to No Inflammatory Effect

Pumpkin Peel 30 - (Follow Previous Protocol Pumpkin Peel 30)

Retinol 15/15 “Long Island Ice Tea” Peel

1. In a clear glass dish, pour 2cc's (4-5 pumps = approx. 2cc) of Retinol 15-15
2. Apply Pre Prep Pad over entire face
3. With a fan brush, gloved hand or 4 x 4 non-woven gauze pad apply product.
4. Fan skin and wait 5 to 10 minutes
5. Apply 2nd application, add an additional 2cc's of Retinol 15-15 (total of 4cc's).
6. Dry with fan, wait 10 minutes
7. Blot and remove excess Retinol 15/15 solution
8. If sensitivity or elevated erythema (redness), apply cool (compresses) until redness subsides
9. Apply Moisture Soothe Plus (f needed).
10. Apply SunMoist SPF 30
11. Client will wash off solution at home in 3-5 hours or before bedtime. **DO NOT SLEEP WITH CHEMICAL**

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitive

TCA Perfecting Peel or TCA Pinnacle Plus Peel

For Superficial Hyperpigmentation & Acne Scarring

THIS IS NOT A TREATMENT FOR A FIRSTTIMECLIENT

- **Pre-condition skin with DERModality™ HQ Lightening Gel and DERModality™ Vitamin A: Intense or HQ/ Retinol Mixer. a minimum of 4-6 weeks before this treatment up to 10-12 weeks for Fitzpatrick 5 or 6.**

Pre-Peel Procedure: Prepare the Skin

1. Secure hair off face.
2. Remove contact lenses.
3. Thoroughly cleanse the skin using a Dermodality Mandelic Green Tea Cleanser to remove any residual skin debris, make-up and surface oils.
4. Prep with Dermodality 50/50 Peel Prep Pads, wipe face several times and fan until dry.
5. Using a small cotton-tipped applicator, apply petrolatum lightly to any cuts or abrasions and other areas in which the peel solution may pool to protect these areas during the peel procedure.
6. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure.

TCA Perfecting or TCA Pinnacle Plus Peel Application

1. Measure 2cc Dermodality TCA Peel into a small glass bowl
2. Apply Dermodality TCA Peel with a 2x2 gauze pad starting with the thicker areas of the skin **2-A:** first (forehead) beginning at the eyebrows and moving to the hairline making vertical strokes. Proceed by applying solution to the chin and upper lip (if gauze becomes dry, rewet the gauze and continue the peel.)

2-B: Turn your attention to the lower eyelid and crow's feet; follow this with application to the sides of the face always follow with 2 coats one vertically and one horizontally.

3. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure
4. The skin may initially turn pink when the solution is applied, then turn red, and finally, the frost.
5. Frost potential is based on several variable factors (See Peel frost page)
6. Leave on the face and allow TCA Peel to absorb into skin. Peel cannot be neutralized.
7. Be sure the number of coats you apply is appropriate for depth you intend. Once the skin has reached the appearance you desire, begin the cooling process, you may cool the skin if you feel it is necessary.
8. Fan skin until dry then wait 10 minutes.
9. Apply Dermodality Moisture Soothe Plus (if needed), followed by SunMoist SPF 30.
10. Client will wash off solution at home in 3-5 hours or before bedtime. **DO NOT SLEEP WITH CHEMICAL**

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitive

TCA Perfecting Peel or TCA Pinnacle Plus Peel & Retinol 10/10 Peel

For Superficial Hyperpigmentation & Acne Scarring

THIS IS NOT A TREATMENT FOR A FIRST-TIME CLIENT

- *Pre-condition skin with DERModality™ HQ Lightening Gel and DERModality™ Vitamin A: Intense or HQ/ Retinol Mixer. a minimum of 4-6 weeks before this treatment up to 10-12 weeks for Fitzpatrick 5 or 6.*

Pre-Peel Procedure: Prepare the Skin

1. Secure hair off face.
2. Remove contact lenses.
3. Thoroughly cleanse the skin using a Dermodality Mandelic Green Tea Cleanser to remove any residual skin debris, make-up and surface oils.
4. Prep with Dermodality 50/50 Peel Prep Pads, wipe face several times and fan until dry.
5. Using a small cotton-tipped applicator, apply petrolatum lightly to any cuts or abrasions and other areas in which the peel solution may pool to protect these areas during the peel procedure.
6. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure.

TCA Perfecting or TCA Pinnacle Plus Peel Application

1. Measure 2cc Dermodality TCA Peel into a small glass bowl
2. Apply Dermodality TCA Peel with a 2x2 gauze pad starting with the thicker areas of the skin **2-A:** first (forehead) beginning at the eyebrows and moving to the hairline making vertical strokes. Proceed by applying solution to the chin and upper lip (if gauze becomes dry, rewet the gauze and continue the peel.)
2-B: Turn your attention to the lower eyelid and crow's feet; follow this with application to the sides of the face always follow with 2 coats one vertically and one horizontally.
3. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure
4. The skin may initially turn pink when the solution is applied, then turn red, and finally, the frost.
5. Frost potential is based on several variable factors (See Peel frost page)
6. Leave on the face and allow TCA Peel to absorb into skin. Peel cannot be neutralized.
7. Be sure the number of coats you apply is appropriate for depth you intend. Once the skin has reached the appearance you desire, begin the cooling process, you may cool the skin if you feel it is necessary.
8. Fan skin until dry then wait 10 minutes.
9. Apply Dermodality Moisture Soothe Plus (if needed), followed by SunMoist SPF 30.

Pure Retinol 10/10 Application

1. In a clear glass dish pour (approx. 2cc-4cc) of Retinol 10/10 Lactic Acid Peel (2cc =4-5 pumps).
 2. With a fan brush, gloved hand or 4 x 4 non-woven gauze apply product over face, **covering** the TCA application.
 3. Allow both to remain on treatment area for 5 minutes blot excess with gauze.
 4. Finish with a small amount of Dermodality Moisture Soothe Plus & Dermodality SunMoist SPF 30.
 5. Client will wash off solution at home in 3-5 hours or before bedtime. **DO NOT SLEEP WITH CHEMICAL**
- All the activity will not go away. The skin will remain warm for couple hours, which is normal**
Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitive

Pumpkin Peel 30 & TCA Perfecting Peel or TCA Pinnacle Plus Peel

Double Layer Peel- Hyperpigmentation (Acne Scarring)

THIS IS NOT A TREATMENT FOR A FIRST-TIME CLIENT

- ***Pre-condition skin with Dermodality HQ Lightening Gel and Dermodality Vitamin A: Intense or Retinol Mixer. a minimum of 4-6 weeks before this treatment up to 10-12 weeks for Fitzpatrick 5 or 6.***

Step 1: Pumpkin Peel 30

Follow Protocol for Pumpkin Peel 30

TCA Perfecting or TCA Pinnacle Plus Peel Application

1. Measure 2cc Dermodality TCA Peel into a small glass bowl
2. Apply Dermodality TCA Peel with a 2x2 gauze pad starting with the thicker areas of the skin **2-A:** first (forehead) beginning at the eyebrows and moving to the hairline making vertical strokes. Proceed by applying solution to the chin and upper lip (if gauze becomes dry, rewet the gauze and continue the peel.)

2-B: Turn your attention to the lower eyelid and crow's feet; follow this with application to the sides of the face always follow with 2 coats one vertically and one horizontally.

3. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure
4. The skin may initially turn pink when the solution is applied, then turn red, and finally, the frost.

2. With a fan brush, gloved hand or 4 x 4 non-woven gauze apply product over face, covering the TCA application.
3. Allow both to remain on treatment area for 5 minutes blot excess with gauze.
4. Finish with a small amount of Dermodality Moisture Soothe Plus & Dermodality SunMoist SPF 30.
5. Client will wash off solution at home in 3-5 hours or before bedtime. **DO NOT SLEEP WITH CHEMICAL**

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitive

TCA Perfecting Peel or TCA Pinnacle Plus Peel & Retinol 15/15 “Long Island Ice Tea” Peel For Superficial Hyperpigmentation & Acne Scarring

THIS IS NOT A TREATMENT FOR A FIRST-TIME CLIENT

•*Pre-condition skin with Dermodality HQ Lightening Gel and Dermodality Vitamin A: Intense or HQ/ Retinol Mixer. a minimum of 4-6 weeks before this treatment up to 10-12 weeks for Fitzpatrick 5 or 6.*

Pre-Peel Procedure: Prepare the Skin

Layer 1: TCA Perfecting or TCA Pinnacle Plus Peel Application

1. Measure 2cc **TCA Perfecting or TCA Pinnacle Plus Peel** into a small glass bowl
2. Apply **TCA Perfecting or TCA Pinnacle Plus Peel** with a 2x2 gauze pad starting with the thicker areas of the skin **2-A:** first (forehead) beginning at the eyebrows and moving to the hairline making vertical strokes. Proceed by applying solution to the chin and upper lip (if gauze becomes dry, rewet the gauze and continue the peel.)
2-B: Turn your attention to the lower eyelid and crow’s feet; follow this with application to the sides of the face always follow with 2 coats one vertically and one horizontally.
3. Place a fan about two feet from the client’s face to help keep the skin cool and reduce discomfort during the peel procedure
4. The skin may initially turn pink when the solution is applied, then turn red, and finally, the frost.
5. Frost potential is based on several variable factors (See Peel frost page)
6. Leave on the face and allow **TCA Peel** to absorb into skin. Peel cannot be neutralized.
7. Be sure the number of coats you apply is appropriate for depth you intend. Once the skin has reached the appearance you desire, begin # 9.
8. Fan skin until dry then wait 10 minutes.
9. Proceed with Retinol 10/10 Application

Layer 2: Retinol 15/15 “Long Island Ice Tea” Application

1. In a clear glass dish pour (approx. 2cc-4cc) of Retinol 15/15 (2cc =4-5 pumps).
2. With a fan brush, gloved hand or 4 x 4 non-woven gauze apply product over face, covering the TCA application.
3. Allow both to remain on treatment area for 5 minutes blot excess with gauze.
4. Finish with a small amount of Dermodality Moisture Soothe Plus & Dermodality SunMoist SPF 30.
5. Client will wash off solution at home in 3-5 hours or before bedtime. **DO NOT SLEEP WITH CHEMICAL**

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitive

Pure Retinol 20/20 Peel

- *Pre-condition skin with Dermodality HQ Lightening Gel and Dermodality Vitamin A: Intense or HQ/ Retinol Mixer. a minimum of 4-6 weeks before this treatment up to 10-12 weeks for Fitzpatrick 5 or 6.*

Pre-Peel Procedure: Prepare the Skin

1. Secure hair off face.
2. Remove contact lenses.
3. Thoroughly cleanse the skin using a Dermodality Mandelic Green Tea Cleanser to remove any residual skin debris, make-up and surface oils.
4. Prep with Dermodality 50/50 Peel Prep Pads, wipe face several times and fan until dry.
5. Using a small cotton-tipped applicator, apply petrolatum lightly to any cuts or abrasions and other areas in which the peel solution may pool to protect these areas during the peel procedure.
6. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure.

Pure Retinol 20/20 Application

1. In a clear glass dish, pour 2cc's (4-5 pumps = approx. 2cc) of Retinol 20-20
2. With a fan brush, gloved hand or 4 x 4 non-woven gauze pad apply product over face
3. Fan skin and wait 5 to 10 minutes
4. Apply 2nd application, add an additional 2cc's of Retinol 20-20 (total of 4cc's).
5. Dry with fan, wait 10 minutes
6. Blot and remove excess Retinol 20/20 solution
7. If sensitivity or elevated erythema (redness), apply cool (compresses) until redness subsides
8. Apply Moisture Soothe Plus (f needed).
9. Apply SunMoist SPF30
10. Client will wash off solution at home in 3-5 hours or before bedtime. **DO NOT SLEEP WITH CHEMICAL**

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitive

Pumpkin Peel 30 – Pure Retinol 20/20 Peel

Double Layer Peel

THIS IS NOT A TREATMENT FOR A FIRST-TIME CLIENT

- ***Pre-condition skin with DERModality™ HQ Lightening Gel and DERModality™ Vitamin A: Intense at a minimum of 4-6 weeks before this treatment***

Step 1: Pumpkin Peel 30

Follow Protocol for Pumpkin Peel 30

Step 2 : Pure Retinol 20/20 Application

1. In a clear glass dish, pour 2cc's (4-5 pumps = approx. 2cc) of Retinol 20-20
 2. With a fan brush, gloved hand or 4 x 4 non-woven gauze pad apply product over face
 3. Fan skin and wait 5 to 10 minutes
 4. Apply 2nd application, add an additional 2cc's of Retinol 20-20 (total of 4cc's).
 5. Dry with fan, wait 10 minutes
 6. Blot and remove excess Retinol 20/20 solution
 7. If sensitivity or elevated erythema (redness), apply cool (compresses) until redness subsides
 8. Apply Moisture Soothe Plus (if needed).
 9. Apply SunMoist SPF 30.
- 10 Client will wash off solution at home in 3-5 hours or before bedtime. **DO NOT SLEEP WITH CHEMICAL**

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitive

Dermodality Modified Jessner Peel

Pre-Peel Procedure: Prepare the Skin

1. Secure hair off face.
2. Remove contact lenses.
3. Thoroughly cleanse the skin using a Dermodality Mandelic Green Tea Cleanser to remove any residual skin debris, make-up and surface oils.
4. Prep with Dermodality 50/50 Peel Prep Pads, wipe face several times and fan until dry.
5. Using a small cotton-tipped applicator, apply petrolatum lightly to any cuts or abrasions and other areas in which the peel solution may pool to protect these areas during the peel procedure.
6. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure.

Dermodality Modified Jessner Peel

1. Measure 2cc Dermodality Modified Jessner Peel into a small glass bowl
2. Apply Dermodality Modified Jessner Peel with a 2x2 gauze pad starting with the thicker areas of the
2-A: first (forehead) beginning at the eyebrows and moving to the hairline making vertical strokes. Proceed by applying solution to the chin and upper lip (if gauze becomes dry, rewet the gauze and continue the peel.)
2-B: Turn your attention to the lower eyelid and crow's feet; follow this with application to the sides of the face always follow with 2 coats one vertically and one horizontally.
3. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure
4. The skin may initially turn pink when the solution is applied, then turn red, and finally, the frost.
5. Frost potential is based on several variable factors (See Peel frost page)
6. Leave on the face and allow Modified Jessner Peel to absorb into skin. Peel cannot be neutralized.
7. Be sure the number of coats you apply is appropriate for depth you intend. Once the skin has reached the appearance you desire, begin the cooling process, you may cool the skin if you feel it is necessary.
8. Fan skin until dry then wait 10 minutes.

10. Client will wash off solution at home in 3-5 hours or before bedtime. **DO NOT SLEEP WITH CHEMICAL**

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitive

Pumpkin Peel 30- Modified Jessner Peel - Long Island Ice Tea

3 Layers Peel

THIS IS NOT A TREATMENT FOR A FIRST-TIME CLIENT

- Pre-condition skin with DERModality™ HQ Lightening Gel and DERModality™ Vitamin A: Intense 4-6 weeks before this treatment (increase pre-conditioning time for Fitzpatrick 4-6)

Pre-Peel Procedure: Prepare the Skin

Step 1: Pumpkin Peel 30 (Follow Protocol Pumpkin Peel 30)

Step 2: Dermodality Modified Jessner Peel

1. Measure 2cc Dermodality Modified Jessner Peel into a small glass bowl
2. Apply Dermodality Modified Jessner Peel with a 2x2 gauze pad starting with the thicker areas of the skin
2-A: first (forehead) beginning at the eyebrows and moving to the hairline making vertical strokes. Proceed by applying solution to the chin and upper lip (if gauze becomes dry, rewet the gauze and continue the application.)
2-B: Turn your attention to the lower eyelid and crow's feet; follow this with application to the sides of the face always follow with 2 coats one vertically and one horizontally.
3. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure
4. The skin may initially turn pink when the solution is applied, then turn red, and finally, the frost.
5. Frost potential is based on several variable factors (See Peel frost page)
6. Leave on the face and allow Modified Jessner Peel to absorb into skin. Peel cannot be neutralized.
7. Be sure the number of coats you apply is appropriate for depth you intend. Once the skin has reached the appearance you desire, begin the # 9 .
- .8. Fan skin until dry then wait 10 minutes.
9. Proceed with **Retinol 15/15 "Long Island Ice Tea" Application**

Retinol 15/15 "Long Island Ice Tea" Application

1. In a clear glass dish pour (approx. 2cc-4cc) of Retinol 15/15 Peel (2cc =4-5 pumps).
2. With a fan brush, gloved hand or 4 x 4 non-woven gauze apply product over face, covering the TCA application.
3. Allow both to remain on treatment area for 5 minutes blot excess with gauze.
4. Finish with a small amount of Dermodality Moisture Soothe Plus (if needed) & Dermodality SunMoist SPF 30.
5. Client will wash off solution at home in 3-5 hours or before bedtime. **DO NOT SLEEP WITH CHEMICAL**

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitive

Dermodality Blemish Peel 20%

Pre-condition skin with DERModality™ HQ Lightening Gel and DERModality™ Vitamin A: Intense 4-6 weeks before this treatment (increase pre-conditioning time for Fitzpatrick 4-6)

Pre-Peel Procedure: Prepare the Skin

1. Secure hair off face.
2. Remove contact lenses.
3. Thoroughly cleanse the skin using a Dermodality Mandelic Green Tea Cleanser to remove any residual skin debris, make-up and surface oils.
4. Prep with Dermodality 50/50 Peel Prep Pads, wipe face several times and fan until dry.
5. Using a small cotton-tipped applicator, apply petrolatum lightly to any cuts or abrasions and other areas in which the peel solution may pool to protect these areas during the peel procedure.
6. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure.

Blemish Peel 20% Application

1. Measure 2cc of Dermodality Salicylic Acid Peel 20% into a small glass bowl
2. Apply Dermodality Salicylic Acid Peel 20% 2x2 gauze pad starting with the thicker areas of the skin first. Proceed in the following order: Forehead, chin, facial perimeter, cheeks, nose, temples and around the eyes.
3. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure
4. Leave on the face and allow Salicylic Acid 20% to absorb into the skin unless erythema (redness) occurs, follow step #5.
5. Be sure the number of coats you apply is appropriate for depth you intend. You may cool the skin if you feel it is necessary. Cooling the skin and making patients more comfortable before sending them home is appropriate. Once the skin has reached the appearance you desire, begin the cooling process. **Soothe the skin with a pre-cooled MOIST (not wet) wash cloth or cool MOIST (not wet) compresses until stinging has subsided.**
6. Fan skin until dry then wait 10 minutes.
7. Apply Dermodality Moisture Soothe Plus (if needed) followed by SunMoist SPF 30.

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitive

Dermodality Blemish Acid Peel 20% with Retinol 15/15 Long Island Ice Tea Peel

THIS IS NOT A TREATMENT FOR A FIRST-TIME CLIENT

- Pre-condition skin with DERModality™ HQ Lightening Gel and DERModality™ Vitamin A: Intense 4-6 weeks before this treatment (increase pre-conditioning time for Fitzpatrick 4-6)

Pre-Peel Procedure: Prepare the Skin

Blemish Peel 20% Application

1. Measure 2cc of Dermodality Blemish Acid Peel 20% into a small glass bowl
2. Apply Dermodality Blemish Acid Peel 20% 2x2 gauze pad starting with the thicker areas of the skin first. Proceed in the following order: Forehead, chin, facial perimeter, cheeks, nose, temples and around the eyes.
3. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure
4. Leave on the face and allow Blemish Acid 20% to absorb into the skin unless erythema (redness) occurs, follow step #5.
5. Be sure the number of coats you apply is appropriate for depth you intend. You may cool the skin if you feel it is necessary. Cooling the skin and making patients more comfortable before sending them home is appropriate. Once the skin has reached the appearance you desire, begin the # 7
6. Fan skin until dry then wait 10 minutes.
7. If skin is calmer, proceed to Retinol 15/15.

Retinol 15/15 "Long Island Ice Tea" Application

1. In a clear glass dish pour (approx. 2cc-4cc) of Retinol 15/15 Peel (2cc =4-5 pumps).
2. With a fan brush, gloved hand or 4 x 4 non-woven gauze apply product over face, covering the TCA application.
3. Allow both to remain on treatment area for 5 minutes blot excess with gauze.
4. Finish with a small amount of Dermodality Moisture Soothe Plus (if needed) & Dermodality SunMoist SPF 30.
5. Client will wash off solution at home in 3-5 hours or before bedtime.

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitivity subside

Dermodality Jessner Peel

THIS IS NOT A TREATMENT FOR A FIRST-TIME CLIENT

- *Pre-condition skin with DERModality™ HQ Lightening Gel and DERModality™ Vitamin A: Intense 4-6 weeks before this treatment (increase pre-conditioning time for Fitzpatrick 4-6)*

Pre-Peel Procedure: Prepare the Skin

1. Secure hair off face.
2. Remove contact lenses.
3. Thoroughly cleanse the skin using a Dermodality Mandelic Green Tea Cleanser to remove any residual skin debris, make-up and surface oils.
4. Prep with Dermodality 50/50 Peel Prep Pads, wipe face several times and fan until dry.
5. Using a small cotton-tipped applicator, apply petrolatum lightly to any cuts or abrasions and other areas in which the peel solution may pool to protect these areas during the peel procedure.
6. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure.

Dermodality Jessner Peel

1. Measure 2cc Dermodality Jessner Peel into a small glass bowl
2. Apply Dermodality Jessner Peel with a 2x2 gauze pad starting with the thicker areas of the skin
2-A: first (forehead) beginning at the eyebrows and moving to the hairline making vertical strokes. Proceed by applying solution to the chin and upper lip (if gauze becomes dry, rewet the gauze and continue the application.)
2-B: Turn your attention to the lower eyelid and crow's feet; follow this with application to the sides of the face always follow with 2 coats one vertically and one horizontally.
3. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure
4. The skin may initially turn pink when the solution is applied, then turn red, and finally, the frost.
5. Frost potential is based on several variable factors (See Peel frost page)
6. Leave on the face and allow Jessner Peel to absorb into skin. Peel cannot be neutralized.
7. Be sure the number of coats you apply is appropriate for depth you intend. Once the skin has reached the appearance you desire, begin the # 9 .
8. Fan skin until dry then wait 10 minutes.
9. Finish with a small amount of Dermodality Moisture Soothe Plus (if needed) & Dermodality SunMoist SPF30
10. Client will wash off solution at home in 3-5 hours or before bedtime. **DO NOT SLEEP WITH CHEMICAL**

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitivity subside

Dermodality Jessner Peel with Long Island Ice Tea 15/15

THIS IS NOT A TREATMENT FOR A FIRST-TIME CLIENT

- *Pre-condition skin with DERModality™ HQ Lightening Gel and DERModality™ Vitamin A: Intense 4-6 weeks before this treatment (increase pre-conditioning time for Fitzpatrick 4-6)*

Pre-Peel Procedure: Prepare the Skin

Layer 1: Dermodality Jessner Peel

1. Measure 2cc Dermodality Jessner Peel into a small glass bowl
 2. Apply Dermodality Jessner Peel with a 2x2 gauze pad starting with the thicker areas of the skin
2-A: first (forehead) beginning at the eyebrows and moving to the hairline making vertical strokes. Proceed by applying solution to the chin and upper lip (if gauze becomes dry, rewet the gauze and continue the application.)
2-B: Turn your attention to the lower eyelid and crow's feet; follow this with application to the sides of the face always follow with 2 coats one vertically and one horizontally.
 3. Place a fan about two feet from the client's face to help keep the skin cool and reduce discomfort during the peel procedure
 4. The skin may initially turn pink when the solution is applied, then turn red, and finally, the frost.
 5. Frost potential is based on several variable factors (See Peel frost page)
 6. Leave on the face and allow Jessner Peel to absorb into skin. Peel cannot be neutralized.
 7. Be sure the number of coats you apply is appropriate for depth you intend. Once the skin has reached the appearance you desire, begin the # 9 .
 - .8. Fan skin until dry then wait 10 minutes.
9. Proceed with **Retinol 15/15 "Long Island Ice Tea" Application**

Layer 2: Retinol 15/15 "Long Island Ice Tea" Application

1. In a clear glass dish pour (approx. 2cc-4cc) of Retinol 15/15 Peel (2cc =4-5 pumps).
2. With a fan brush, gloved hand or 4 x 4 non-woven gauze apply product over face, covering the TCA application.
3. Allow both to remain on treatment area for 5 minutes blot excess with gauze.
4. Finish with a small amount of Dermodality Moisture Soothe Plus (if needed) & Dermodality SunMoist SPF 30.
5. Client will wash off solution at home in 3-5 hours or before bedtime. **DO NOT SLEEP WITH CHEMICAL**

Retinol 15/15 "Long Island Ice Tea" Application

1. In a clear glass dish pour (approx. 2cc-4cc) of Retinol 15/15 Peel (2cc =4-5 pumps).
2. With a fan brush, gloved hand or 4 x 4 non-woven gauze apply product over face, covering the Jessner application.
3. Allow both to remain on treatment area for 5 minutes blot excess with gauze.
4. Finish with a small amount of Dermodality Moisture Soothe Plus (if needed) & Dermodality SunMoist SPF 30.
5. Client will wash off solution at home in 3-5 hours or before bedtime.

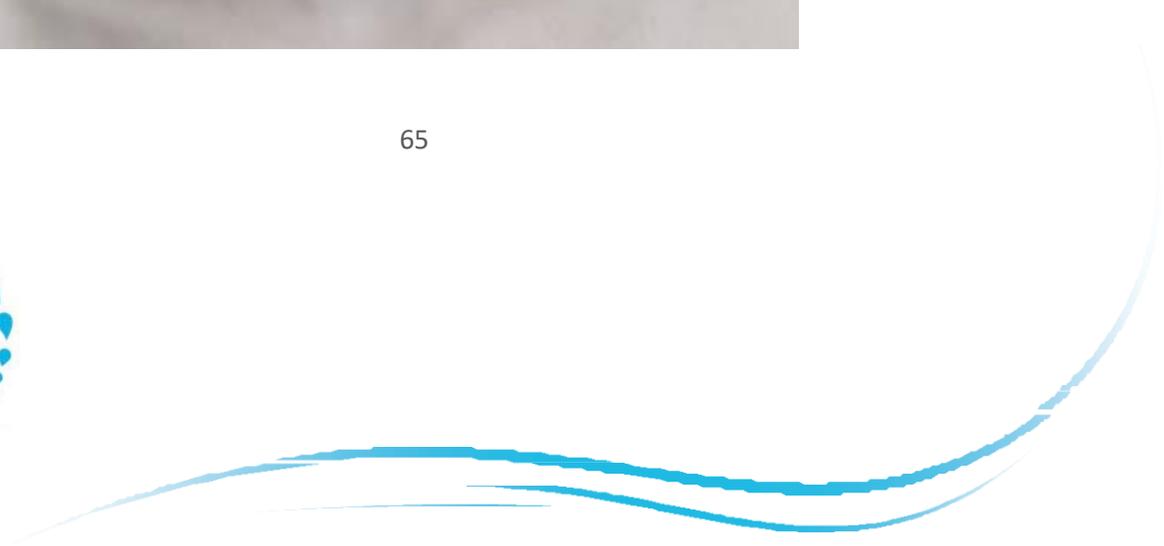

All the activity will not go away. The skin will remain warm for couple hours, which is normal

Note: Your skin may be sensitive for up to 10 days, in this case follow post care until sensitivity subsides.

Prescription System

The Dermodality Prescription System was developed for the aesthetician. It offers a complete and simple approach to treat the skin through Life Stages, while allowing the aesthetician to customize treatments specific to the seven facial zones.

The Prescription System consists of concentrated components that the aesthetician can use to formulate any treatment to meet the skin condition needs of the client.

With this system, the professional can assess the skin condition in each of the seven zones and treat each one by mixing customized formulations of concentrated additives to achieve desired results. This system gives the skin care specialist the opportunity to provide results-oriented treatments that are customized for each client, using the purest of ingredients.

The Dermodality Prescription System is designed to customize facial treatments to address the skin conditions of any client. The unique array of products, with a high degree of potency, gives the aesthetician the ability to create an exclusive facial treatment for any client that cannot be received anywhere else.

The Prescription Facial System is an aesthetic chemistry set, whereas the skincare professional becomes the chemist. The aesthetician must understand how mixing ingredients together will affect the result. The provider has access to all the highly active ingredients, that typically comprise prepared products, without the preservatives and buffers. Therefore, the provider must become very familiar with the components, how they work together, and how they affect the skin before starting the treatment.

In commercially prepared products, the level of active ingredients is typically less than 1%. The active ingredient level can be used as high as 5%. By using the customized blending system, the professional can use the maximum concentration of actives and achieve better results.

The components of the Dermodality Prescription System include bases, serums and Aessential Complexes. All components are highly concentrated and are combined to create highly effective, nourishing treatments through mask application and serums. These treatments target any Life Stage and Zone condition.

Bases

- Four concentrated base formulations
- Exfoliation/pre-extraction, treatment, post peel masks
- Bases are the starting point for mask formulations

These Bases Include:

- Gel Mask
- 3 powder bases blended with water and blending oil
- Rhassoul Clay Mask Base
- Oatmeal Mask Base
- Seaweed Mask Base

Note: Measurements are based on level, non-compressed teaspoons. You may need to add powder or water until desired texture is achieved.

Gel Mask

- Moisturizing, soothing and anti-aging
- Post treatment (peels) and post environmental exposure (wind, sun)
- Minimizes redness
- Recommended for all Life Stages

Recommended Mixture: This mask is premixed.

Use 1 teaspoon alone OR with correct aessential complexes

Ingredients:

Aloe

- Anti-inflammatory, Vitamin A, C, E & B12
- Moisturizing, help smooth texture
- Contains antiseptic properties to promote healing

Chamomile

- Anti-inflammatory, natural antiseptic, soothing

Creatine

- Natural amino acid
- Anti-aging
- Minimizes skin irritation from various environmental factors
- Provides moisture

Rhassoul Clay Mask

- Minimizes oil, detoxifies, hydrates
- To be blended with water and blending oil
- Draws oil and bring moisture to the surface
- Creates clarity and even tone
- Most effective if allowed to dry
- Not recommended to be used with steam
- Not recommended as a pre-extraction mask
- Teen and Anti-Aging Life Stages

Recommended Mixture:

- 1 teaspoon Rhassoul Clay Mask
- 1 teaspoon Water
- 10 drops Blending Oil
- Aessential Complexes

Ingredients

- Rhassoul Clay
 - Absorbs oil
 - Cleanses and detoxifies
 - Rich in minerals
 - Improves skin clarity, skin elasticity and firmness
 - Improves texture, removes surface oil, exfoliates

Oatmeal Mask

- Soothing and calming
- Treats sensitivity, rosacea, irritation, dryness, allergic reaction
- Post waxing to reduce redness and inflammation
- Pre-extraction mask
- Use steam to keep moist
- Recommended for all Life Stages

Recommended Mixture:

- 1 teaspoon Oatmeal Mask
- 1 teaspoon Water
- 10 drops Blending oil
- Aessential Complexes

Ingredients:

- Colloidal Oatmeal
 - Soothing
 - Reduces inflammation and irritation
 - Prevents TEWL
 - Treats eczema, psoriasis, bug bites, sunburn, irritations

Seaweed Mask

- Detoxifies, hydrates, increases circulation
- Mineral rich, nourishing, anti-aging
- Treats under active, sluggish or thick keratinized skin
- Not for moderate acne conditions or extreme sensitivity
- Recommended for Adult and Anti-Aging Life Stages

Recommended Mixture:

- 1 teaspoon Oatmeal Mask
- 1 teaspoon Water
- 10 drops Blending oil
- Aessential Complexes

Ingredients:

Brown Seaweed

- Highly mineralized and
- Rich with amino acids and anti-oxidants
- Aids in the absorption and retention of moisture

Spirulina

- Anti-stress nutrient
- Hydrator
- Rich in pantothenic acid
- Aids in normalizing oil, stress and hydration
- From blue green algae
- Rich in proteins
- Vitamins A and E

Natural Green Clay

- Softens skin texture
- Improves elasticity

Carriers

- Carriers “carry” the active ingredients
- Without carriers, effective absorbency may not occur
- Carriers include Blending Oil, Moisture Serum and Facial Massage Cream

Blending Oil

- Natural carrier for blending all powder bases
- Adds lubrication, smoothness and hydration
- Recommended only for mixing

Recommended Amount: 10 Drops

Ingredients:

- Safflower
- Oil Jojoba
- Oil Olive
- Oil
 - Naturally rich in fatty acids and anti-oxidants
 - Specially formulated blend of nourishing oils
 - Helps cell renewal
 - Aids in the prevention of trans-epidermal water loss (TEWL)

Moisture Serum

- Used as a base for all customized serum formulations
- Additive for skin that needs additional hydration
- Recommend for all Life Stages

Recommended Amount:

- 1 teaspoon either alone or with Aessential Complexes

Ingredients:

- Creatine
 - Natural amino acid
 - Anti-aging
 - Minimizes skin irritation from various environmental factors
 - Provides moisture
- Hyaluronic Acid
 - Moisturizes and lubricates skin
 - Binds up to 1,000 times its weight in water
 - Significantly hydrates skin
 - Providing a lifting and tightening effect
 - Minimizes fine lines
 - Prevents Trans-Epidermal Water Loss (TEWL)
- Punica Granatum (Pomegranate) Fruit Extract
 - Moisturizing and restructuring active
 - Restores water circulation in the skin

Facial Massage Cream

- Used for formulations that include facial manipulation or massage

Essential Complexes

- Highly concentrated, active materials
- Allows the aesthetician to blend a customized formula
- Deliver the maximum level of active ingredients
- Provides the most effective result possible
- Used in exfoliation/pre-extraction, treatment, post peel masks and moisture serums
- Complexes are highly concentrated
- Should never be used alone or directly on the skin

The Six Highly Active Concentrates of Additives Include:

- Anti-Oxidant Complex
 - Anti-Inflammatory Complex Multi-Vitamin Complex Exfoliation Complex
 - Multi-Mineral Complex
 - Anti-Irritant Complex
-
- Choose best Complex or Complexes to meet client needs
 - If layering, pay attention to the number of drops used
 - Do not exceed number of drops specified for entire treatment
 - It is advised not to layering complexes for beginning users
 - An awareness of the strength needs to be developed
 - Layering is a more advanced technique
 - Once potency and purpose of ingredients is understood, layering can be performed

Anti-Oxidant Complex

- Anti-Oxidants reduce and normalize free-radical damage
- Unique and effective in aiding in the repair and nourishment of the skin

Do not exceed 10 drops in total treatment

Ingredients:

- Sunflower Oil
- Meadowfoam Seed Oil
- Olive Oil
- Grapeseed Oil
- CarrotSeed Oil
- Raspberry Seed
- Oil Vitamin E
- Oil Properties
 - Blend of cold pressed seed oils
 - Exceptional anti-oxidant properties

Anti-Inflammatory Complex

- Perfect blend for neutralizing inflammation
- Treats pre-existing inflammatory conditions, such as rosacea

Ingredients:

- Bisabolol
 - Anti-inflammatory, reduces heat, swelling and redness
 - Derived from chamomile
- Licorice Extract
 - Blocks irritation
 - Anti-inflammatory, anti-oxidant, soothing properties
 - Natural Tyrosine inhibitor
- Oil Properties

Multi-Vitamin Complex

- Replenishes depleted essential vitamins and nourishment to
- Aids in environmental repair and moisture retention
- Combats free-radical fine lines and wrinkles

Do not exceed 3 drops in total treatment

Ingredients:

- Vitamin A
 - Helps smooth fine lines and wrinkles, increasing skin clarity
 - Helps restore skin firmness
- Vitamin C
 - An anti-oxidant that neutralizes free radicals
- Vitamin E
 - Acts as a free radical scavenger
 - Helps to combat lipid peroxidation
- Oil Properties

Exfoliation Complex

- Aids in preparation for extractions
- Only use for exfoliation / pre-extraction treatments
- Use only with Oatmeal Mask or Moisture Serum

Do not exceed 4 drops in total treatment

Ingredients:

- Prickly Pear Extract
 - Natural exfoliant treatment to boosts natural peeling process
 - Increases the activity of enzymes and activates cell renewal
- Water Properties

Multi-Mineral Complex

- Unique blend of minerals
- Helps rebuild and sustain the integrity of the skin
- Use in acne treatments and re-hydration formulas

Do not exceed 5 drops in total treatment

Ingredients:

- Silicon, Magnesium, Copper, Iron and Zinc
 - Contains five essential minerals
 - Helps revitalize skin cells
 - Aids in wound healing and skin repair
 - Neutralizes inflammation
 - Prevents TEWL
- Water Properties

Anti-Irritant Complex

- Neutralizes irritation to prevent further damage
- For environmental conditions, as shaving, sun, waxing, wind
- Not recommended for pre-existing conditions as in rosacea

Do not exceed 8 drops in total treatment

Ingredients:

- Canadian Willowherb
 - Normalizes conditional sensitivities
 - Anti-irritant properties
 - Reduces the formation of free radicals and erythema
- Alteromonas Ferment Extract
 - Exopolysaccharide derived from the deep sea
 - Reduces skin reactivity and intolerance
 - Activates skin repair and restructuring process
 - Reduces irritation of sensitive skin from chemical, mechanical and UVB
- Water Properties

Identifying Life Stages

Identifying Life Stages is the foundation for targeting skin conditions. Defining the skin's Life Stage takes into consideration the following:

- The age range of the client
- The current and on-going skin conditions

Once these two factors are established the skin's Life Stage can be determined. The Life Stage will help to assess and address each skin condition accurately and effectively, removing the guesswork from of the treatment selection and home care recommendations.

3 Life Stages: Teen, Adult and Anti-Aging

- Age alone cannot define what conditions are present
- Any condition can exist in any life stage
- Life Stage determines how to address conditions

Teen/Youth Life Stage

Visible signs include:

- Open and closed comedones
- Pustules, papules, nodules
- Excessive seborrhea
- Congestion
- Skin lacking in water moisture
- Uneven texture and tone

Professional Care:

- Rhassoul Clay Mask to reduce oil and detoxify
- Oatmeal Mask for calming irritated skin conditions
- Gel Mask and Moisture Serum for moisture imbalances
- Do not use oil formulations in "teen" condition treatments

Adult Life Stage

Visible signs include:

- Hint of fine lines
- Beginning changes in texture and tone
- Dehydration due to water and oil moisture loss
- Pigment disorders, keratinization and sensitivities

Professional Care:

- Seaweed Mask for circulatory conditions and to even skin tone
- Oatmeal Mask or Moisture Serum
- Anti-Oxidant Complex and Multi-Vitamin Complex
- Helps capillary damage and water retention
- Series of Pumpkin 30% Peels

Anti-Aging Life Stage

Visible signs include:

- Fully developed fine lines and wrinkles
- Loss of elasticity, pigment disorders
- Thinning skin
- Decrease in water retention
- Capillary damage

Professional Care:

- Seaweed Mask for circulatory conditions and to even out skin tone
- Rhassoul Clay mask and Anti-oxidant Complex for elasticity and firmness
- Oatmeal Mask or Moisture Serum
- Anti-Oxidant Complex and Multi-Vitamin Complex
- Helps capillary damage and water retention
- Gel Mask and Moisture Serum for moisturizing and anti-aging formulations
- Series of Pumpkin 30% Peels

Identifying Zones/Life Stages

The Prescription System Recognizes 7 Zones on the Face

- Each zone has characteristics and conditions of Life Stages and lifestyles
- Each client has a different target condition in each specific zone
- One could have acne in zone 3 and dryness in zone 4
- Prescription System allows the ability to address specific zone or zones
- Zone 1 - The Forehead
 - Congestion
 - Acne
 - Moisture Imbalance
 - Keratinization
- Zone 2 - Eyes, Temple Area, between the Eyebrows
 - Milia
 - Wrinkles
 - Congestion
 - Keratinization
- Zone 3 - Cheeks
 - Couperose
 - Milia
 - Comedones
 - Wrinkles
- Zone 4 - Jaw Line
 - Congestion and Acne
 - Pigmentation Disorders
 - Dryness and Moisture Imbalance
 - Comedones
- Zone 5 - Nose and Upper Lip
 - Couperose
 - Sensitivity and Redness
 - Congestion
 - Papules and Pustules
 - Wrinkles and Pigmentation Disorders
- Zone 6 - Chin
 - Congestion,
 - Acne
 - Redness
- Zone 7 - Neck
 - Pigmentation Disorders,
 - Acne, Comedones, Congestion
 - Moisture Imbalance, Dryness, Wrinkles

Protocol for Prescription System

- Determine the Life Stage of the skin
- Assess the skin in the different facial zones, targeting the conditions
- Discuss the findings with the client and prepare treatment strategies
- Once the needs are determined, refer to the formulation section
- OPTION: customize formulations to address client needs
- Cleanse the skin with Dermodality Foaming Cleanser
- Prepare Exfoliation/ Pre-Extraction Mask using one of the following options:
 - Oatmeal Mask with Exfoliation Complex
 - Best for deep extractions
 - Use with steam and leave on for 8-10 min.
 - Moisture Serum with Exfoliation Complex
 - Best for mild extractions
 - Use with steam
 - leave on for 8-10 minutes
 - Pumpkin 30% Peel
- Customized serums and facial massage (optional):
 - Customized serums are composed of 1 teaspoon Moisture Serum
 - Aessential Complex that meets treatment needs
 - Facial Massage performed with Facial Massage Cream
- Perform final treatment mask
 - Refer to the Skin Life Stage Chart for the recommended ingredients
 - Select by Skin Life Stage and conditions to be treated in each zone
 - Mix the recommended base
 - Add recommended Aessential Complexes
 - Leave on for 8-10 minutes
- Tone the skin using Dermodality Mandelic Toner
- Finish by applying appropriate Dermodality Moisturizer
- Recommend appropriate Dermodality home care

Assessment Protocol

- Involve the client in the assessment
- Ask open-ended questions
- Discuss observations
- Discuss recommendations
- Discuss treatments being performed and why

Instructions for Prescription System Assessment Form:

- Page 1
 - Write client name, date, provider name, and primary Life Stage
 - Have client fill out a medical history form
 - Enter treatment products and homecare after skin analysis
- Page 2
 - The top section lists the Life Stages with the conditions
 - Each stage is numbered below
 - Assess each zone and assign a Life Stage letter A, B, or C
 - Assess the conditions of each zone and assign a number
 - Refer to Life Stage Spread Sheet
 - Write formula for exfoliation/pre-extraction and treatment masks UVB
- Return to page 1
- Complete remaining information
- Mix formulas
- Explain reasons for formula choices

The Prescription System Recognizes 7 Zones on the Face

Teen Life Stage Conditions

Open Comedones (blackheads)

- Hardened mass of dead skin cells and sebum in the follicle
- Blackness at the head of the sebum is the result of oxidation

Closed Comedones (whiteheads)

- These occur on the surface of the skin
- Caused when pores are blocked by dead skin cells
- This blockage prevents the secretion of sebum from the follicle
- These appear as flesh colored bumps on the skin and usually are first noticed in zones 1, 5, 6

Papules (pimples)

- The mildest form of inflammatory acne
- Appear as a solid, small inflamed red bump that feels tender
- Are raised slightly above the skin and often occur in small clusters that are
- Rough to the touch
- No pus is present, but may mature into a pustule

Pustule

- Small round dome shaped lesions that are inflamed with p.acnes bacteria
- Develop when hair follicle or pore weakens and ruptures
- Have a visible white or yellow tip

Nodules

- Solid, dome-like shaped or irregularly shaped lesions
- Feel like hard bumps just under the skin surface
- Extend into deeper layers of the skin often
- Can cause tissue destruction resulting in scarring
- Nodular acne is a severe form of acne and can be very painful
- The average lifespan of a nodule is up to 8 weeks
- Scarring is associated with nodular acne

Seborrhea - Over activity of the sebaceous glands

Moisture Imbalance (water)

- Skin is lacking in water moisture (dehydration)
- Moisture may be unevenly distributed, or unable to retain water causing rapid

evaporation from the skin surface

Congestion-Oil production becomes sluggish, consistency of sebum becomes thick and unable to flow from the Pore

- Sebum and skin cells trapped and collect in the pore
- Texture becomes rough in texture

Texture/Tone

- Rough texture due to uneven stratum caused by lack of exfoliation

Adult Life Stage Conditions

Texture/Tone

- Rough texture due to uneven stratum caused by lack of exfoliation
- Pores becomes clogged creating congestion
- Coloration (tone) can appear uneven

Psoriasis

- A skin disorder that includes inflammation
- excessive skin production creating scaly patches
- Disorder is chronic, may occur in patches or entire body

Eczema

- A form of dermatitis.
- Skin is often raised and inflamed
- Itchiness can occur with each out-break

Milia

- Sometimes referred to as a whitehead
- Appears as a white hardened mass that forms a small bead
- Trapped under the upper layer of skin
- Often found around eye area and fragile facial tissue
- Miss-use of oily products can contribute to development of milia

Folliculitis

- The hair follicle becomes inflamed and irritated

Dermatitis

- Skin is often inflamed with red rash like clusters on the skin
- Triggered by food, substances in the air or personal care products

Moisture Imbalance (lack of water)

- Skin is lacking in water moisture (dehydration)
- Moisture may be unevenly distributed
- May be unable to retain water causing rapid evaporation

Sensitivity/Redness

- Inflammatory response occurs, primarily in the form of redness
- May be due to treatments, cosmetics, environment, food, etc.

Dryness (lacking oil)

- When the skin produces an insufficient amount of oil to maintain moisture levels

Pigment Disorders

- Melanin or pigment becomes uneven due to hormonal change and/or sun damage

Edema

- The abnormal accumulation of fluid in the interstitial spaces of the tissue

Keratinization

- A collection of cells on the skin's surface that appears dry and flaky

Rosacea

- Chronic inflammatory congestion found on cheeks, nose, and chin
- Characterized by redness and dilation of blood vessels and redness
- Sometimes papules and pustules accompany this condition
- Aggravated by spicy foods, alcohol, extreme temperature, stress and exposure to sunlight

Anti-Aging Life Stage Condition

Pigment Disorders

- When melanin or pigment becomes uneven due to hormone change or sun damage

Wrinkles

- A result of the aging process
- Occur when there is a breakdown in collagen
- External factors: poor hydration, smoking, sun damage cause premature wrinkling

Dryness (lacking oil)

- When the skin produces an insufficient amount of oil to maintain moisture levels

Moisture Imbalance (lack of water)

- Skin is lacking in water moisture (dehydration)
- Moisture may be unevenly distributed
- May be unable to retain water causing rapid evaporation

Thinning Skin

- Break down of elastin and collagen with the deterioration of adipose tissue
- Occurs as skin ages or when exposed to poor hydration, smoking, sun damage

Sensitivity/Redness

- Inflammatory response occurs, primarily in the form of redness
- May be due to treatments, cosmetics, environment, food, etc.

Elasticity

- Skin's ability to expand and contract

Texture/Tone

- Rough texture due to uneven stratum caused by lack of exfoliation
- Pores becomes clogged creating congestion
- Coloration (tone) can appear uneven

Brightness

- The luminance and translucency of the skin
- Reflects health and vitality
- Dullness may indicate other conditions persist

Couperose

- Dilated capillaries that appear more prominent on the cheeks and nose.
- Bluish in color and appear in fine lines
- Redness accompanies this condition sunlight

	X	<p>Vitamin A: Intense <i>Anti-wrinkle & Cell Stimulation</i></p> <p>Description: Created by formulating a clinical level of Pure-Retinol .8%, this dual-purpose serum cream targets dark spots caused by melasma, acne, UV exposure and more. It helps improve skin elasticity by building healthy collagen elastin and fibroblast. After application our pure-retinol base will cascade and mimic prescription Retina. Formulated to re-texture the skin's surface, unclog pores and repair aging and sun damaged skin resulting in a naturally radiant complexion. By using the pure and refined retinol, this serum increases the production of healthy skin cells while breaking up accumulations of dead skin cells, revealing visibly reduced signs of aging. Available size: 30 ml/ 1 fl. Oz</p> 	<p>.8% retinol, anti-wrinkle, firming & cell stimulation pH-3.6 (pm)</p> <p>Benefits:</p> <ul style="list-style-type: none"> • Anti-aging and acne treatment • Pre-conditioning benefits • Minimizes fine lines and wrinkles • Antioxidant • Sloughs dead skin cells • Visibly reduced signs of aging • Causes no dehydration or sensitivity • Helps repair aging and sun damaged skin <p>Directions: Apply after cleansing and toning at night, can be worn over Vitamin C: Intense, M: Corrective, HQ Lightening Gel, Hyaluronic C Ester</p> <p>Key Active Ingredients: Anti-inflammatory Actives: Aloe Vera, Triacetate (Unisooth), Naringenin</p> <p>Anti-aging Actives: Pure Retinol .8%, Lactic Acid, L-Arginine (amino acid), Sodium PCA & Lecithin</p> <p>Anti-oxidants: L-Ascorbic Acid, Ferulic Acid</p> <p>Ingredients: Deionized Water, Retinol, Polysorbate 20, Glycerin, Sodium Acrylates Copolymer, Lecithin, Lactic Acid, Ascorbic Acid, Aloe Barbadensis Leaf Juice, L-Arginine, Ferulic Acid, Sodium PCA, Salicylic Acid, Panthenyl Triacetate (Unisooth), Naringenin, Polyacrylate-13, Polyisobutene, Polysorbate 20, Sodium Phytate, Phenoxyethanol, Ethylhexylglycerin</p>

X		<p>Vitamin C: Intense™ w/L-Ascorbic Acid <i>Free-radical Scavenger & Brightener</i></p> <p>Description: This serum sets an industry standard with concentrations of 20% L-ascorbic, 3% Sodium Ascorbyl and Magnesium Ascorbyl phosphates in an multi antioxidant complex. Highly dense levels of antioxidants provide advanced environmental protection that include the protection of inter structure of the cell matrix. Including the ability to maintain pliability of the cellular membrane allowing for better housing of trans epidermis water. Our formula significantly defends skin from free radicals that causes prematurely aging of the skin, protects from cell level UV rays, infrared radiation, pollution, and lifestyle factors. We then added a skin brightening grouping that includes a multi-C complex, Alpha -arbutin and fruit acids, the skin often displays noticeable brightening and evening tonnage shortly after consistent usage. Available size: 30 ml/ 1 fl. Oz</p> 	<p>Anti-aging, Antioxidant & Brightener pH-3.6 (am)</p> <p>Benefits:</p> <ul style="list-style-type: none"> • Highly concentrated vitamin C • Treats aging skin • Treats environmentally damaged skin • Enhances collagen production • Reduces hyperpigmentation • Provides immediate visual changes • Reveals younger, brighter, tighter skin <p>Directions: Apply after cleansing and toning in morning, can be worn over M: Corrective or under Vitamin A: Intense, Hyaluronic C Ester</p> <p>Lightening and Brightening: Alpha Arbutin, L-ascorbic Acid, Magnesium Phosphate, Dermodality's proprietary multi-fruit complex</p> <p>Anti-oxidants: L-ascorbic Acid, Magnesium Ascorbyl Phosphate, Ferulic Acid, Dermodality's Multi-fruit complex.</p> <p>Ingredients: Deionized Water, Ascorbic Acid, Magnesium Ascorbyl Phosphate, Citrus, Aurantium Dulcis (Orange) Extract, Alpha-Arbutin, Hydroxyethylcellulose, Saccharum Officinarum (Sugar Cane Extract), Pyrus Malus (Apple) Extract, Camellia Sinensis Leaf Extract, Citrus Limon (Lemon) Fruit Extract, Sodium Nitrate (residual), Propanediol, Cellulose, 2-Hydroxypropyl Ether, Sodium Benzoate, Phenoxyethanol</p>

X	X	<p>Moisture Soothe Plus Calming, Moisturizing and Protecting</p> <p>Description: A highly active, intensive moisturizer packed with a serum-based complex of moisture-sealing, anti-inflammatory and antioxidant actives. It provides the greatest level of penetrating moisture that dives deep into the skin allowing for intensive hydration without the feel of heaviness normally associated with concentrated moisturizers. This light soothing cream gives temporary relief from itching caused by skin irritations, inflammation, rashes, eczema, allergies, and seborrheic Dermatitis.</p> 	<p>Calming, Moisturizing and Protecting (am/pm) pH 6.0</p> <p>Contains Dermodality's Propitiatory Moisture Sealing technology</p> <ul style="list-style-type: none"> • Intensive moisture without unwanted weight that seals in moisture, allowing skin to protect and speed up the healing process • Highly effective as a day or night cream • Contains a large group of anti-inflammatory actives that provides skin with the greatest combination of moisture soothing properties • Post-treatment cream designed for most all evasive treatments – • A must for post chemical peels • Quickly provides relief from irritation and inflammation that includes: Minor skin irritations Inflammation Itching Rashes Eczema Allergies Poison ivy Poison oak soaps Insect-bites Seborrheic dermatitis

Professional Peels

50/50 Peel Prep Pads

- Dual Solvent System
- 91% Isopropyl Alcohol
- Acetone
- Effectively cleanses & removes sebum, oils, residues
- Preps skin to provides a more uniform peel

Pumpkin Peel 30%

3.2pH, 10% Glycolic, 20% Lactic Acid

This award-winning peel provides exfoliation allowing acids to penetrate clogged pores and assists in cell proliferation. It contains Bilberry extract – vaso dilation for better penetration. It can be used alone or with other chemical peels, ideal for use with other facial treatments as in micro-dermabrasion.

- Provides exfoliation
- Allows acids to penetrate clogged pores
- Assists in cell proliferation
- Bilberry extract – vaso-dilation allows for better penetration
- Can be used alone or with other chemical peels
- Ideal for use with other facial treatments as in micro-dermabrasion

Pure Mandelic 25% AHA Peel

3.0pH, 25 % Mandelic Acid, 10% Lactic Acid, 2 % Salicylic Acid, 2% L-Ascorbic Acid

This highly active anti-inflammatory peel helps remove dull layers of dead skin cells while its AHA's improve the texture of skin. It will decongest skin, unclog pores and reduce the appearance of fine lines wrinkles.

- Highly anti-inflammatory
- Mandelic acid helps remove dull layers of dead skin cells
- AHA's improve the texture of skin
- Decongests skin and unclogs pores
- Reduces the appearance of fine lines and wrinkles
- Helps stimulate collagen and elastin production

25% Mandelic Acid	2% Salicylic Acid
10% Lactic Acid	2% L-Ascorbic Acid

C: Vitality AHA Peel

3.0 pH, AHA 25%, 17% L-Ascorbic Acid

This award-winning peel contains highly concentrated set of vitamins and fruit-driven antioxidants that contain skin balancing nutrients that replaces traditional enzyme scrubs. Made with Bilberry Extract for better penetration and anti-inflammatory ingredients for minimal irritation.

- Highly concentrated vitamins and fruit-driven anti-oxidants
- Contains skin balancing nutrients
- Replaces traditional enzyme scrubs
- Uses highly concentrated distilled extracts
- Bilberry extract – vaso dilation allows for better penetration
- Concentrated anti-inflammatory Ingredients for minimal irritation

Intensive Brightening Peel 45% Plus

3.0pH, Kojic Acid, Mandelic, Lactic, Glycolic, Salicylic, L-Ascorbic Acid, Bilberry, Beta-Carotene

This peel visibly lightens and brightens skin while it becomes softer and smoother. It contains Bilberry extract – vaso dilation that allows for better penetration. Its correcting mechanism is immediately visible and will have no irritation when used in combination with Pumpkin Peel or Retinol/Lactic peels.

- Visibly lightens and brightens skin
- Skin becomes softer and smoother
- Bilberry extract – vaso dilation allows for better penetration
- Correcting mechanism is immediately visible
- No irritation even when used with Pumpkin peel

Kojic Acid	Mandelic Acids
Lactic Acids	Salicylic Acid
Glycolic Acids	Beta-Carotene
L-Ascorbic Acid	Bilberry

Cascade Retinol Peel 10

pH 2.2, Retinol 10 %, Lactic 10%

A blend of retinol and retinol palmitate allows for a safe and controllable peel that begins the process of lightening, brightening while supporting the development of collagen, elastin and fibroblast. A clinically proven formula that cascades into retinoic acid providing the ability to resurface the skin while enhancing the skin cellular structure.

- Use over TCA, Salicylic, Modified Jessner, Jessner Peels
- Instantly reduces irritation and discomfort
- Last step in peel process
- Do not remove, client wears home
- Follow with SunMoist

10% Retinol	10% Lactic Acid
-------------	-----------------

Long Island Ice Tea Retinol 15/15

15% Retinol, 15% Lactic Acid, Aloe Vera

This highly-concentrated retinol and lactic acid formula enhances the natural rejuvenation process. This is the last step in peel process that instantly reduces irritation and discomfort for the client to wear home. It should be used over TCA, Salicylic, Modified Jessner, Jessner Peels.

- Use over TCA, Salicylic, Modified Jessner, Jessner Peels
- Instantly reduces irritation and discomfort
- Highly concentrated retinol & lactic acid formula
- Enhances natural rejuvenation process
- Last step in peel process
- Do not remove, client wears home
- Follow with SunMoist

10% Retinol	15% Lactic Acid
Aloe Vera	

Pure Retinol 20/20

20% Retinol, 10% Lactic Acid, 10% Mandelic Acid

This highly-concentrated retinol, lactic & mandelic acid formula, reduces irritation and discomfort while minimizing pore size. It should be used over TCA, Salicylic, Modified Jessner, Jessner Peels.

- Use over TCA, Salicylic, Modified Jessner, Jessner Peels
- Reduces irritation and discomfort
- Highly concentrated retinol, lactic & mandelic acid formula
- Minimizes pore size
- Last step in peel process
- Do not remove, client wears home
- Follow with SunMoist

25% Mandelic Acid	20% Retinol
10% Lactic Acid	

Blemish 20 Peel

3.0 pH, 20% Salicylic Acid

Formulated to break down sebum and minimizes comedowns. It contains BHA—oil soluble acid, derived from willow bark. Keratolytic and antimicrobials that control P-acnes bacteria (acne causing) and aids in the extraction process.

- BHA – oil soluble acid
- Derived from willow bark
- Breaks down sebum
- Minimizes comedones
- Keratolytic and antimicrobial
- Controls P-acnes bacteria (acne causing)
- Aids the extraction process
- Treat every 4 to 6 wks for 4 to 6 treatments

20% Salicylic Acid

TCA Perfecting Peel

1.2 pH, 10% Trichloroacetic Acid (TCA), 5% Mandelic Acid

Developed to lighten hyper-pigmentation, Smooths and refines texture, and corrects acne scarring.

- Controllable effects when properly administered
- Helps lighten hyper-pigmentation
- Smooths and refines texture
- Helps corrects acne scarring
- Do not apply on active acne

Trichloroacetic Acid	5% Mandelic Acids
10% TCA	

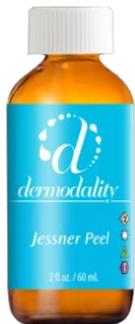

Jessner Peel

1.8 pH, 17% Lactic, 17% Salicylic, 17% Resorcinol

This medium to high-depth peel and TRIO acid combination removes multiple skin layers instantaneously to provide smooth texture and healthy-looking skin.

- Medium to high-depth peel
- TRIO acid combination
- Provides benefits from potent ingredients
- Removes multiple skin layers instantaneously
- Provides smooth texture and healthy looking skin

17% Resorcinol	17% Lactic Acid
17% Salicylic Acid	

Glossary

Dermodality Glossary

ALLANTOIN: This ingredient helps heal wounds and stimulates the growth of healthy tissue.

AMINO ACID COMPLEX: Building blocks of proteins, these are important components for moisturizing the skin.

ANTI-OXIDANT: These are molecules that neutralize free radicals. The human body naturally contains antioxidants, but external aggressors can deplete our body's protective antioxidant reserve. Eating foods rich in antioxidants can be beneficial. Many dermatologists recommend a topical application of antioxidants to help prevent premature signs of aging. Antioxidants act as "free radical scavengers" and hence prevent, and repair damage done by these free radicals. The most important ones are Vitamins A, C, E, Selenium, Co-Q10.

AVOBENZONE: A UVA/UVB blocker that is clinically proven to help prevent hyper-pigmentation and premature aging.

BARRIER FUNCTION: This is a natural barrier made by the skin to prevent any water loss. The structural arrangement of skin cells and lipids is similar to a "bricks and mortar model" where the skin cells are the bricks, and the lipids are the mortar. Water from within the skin must negotiate a pathway through this structure to be lost at the surface - skin with a good barrier (also known as moisture barrier/barrier function) can help reduce the rate of surface moisture loss (TEWL) from the skin. The condition of skin barrier is a key signal of skin health. With a compromised barrier skin will become dehydrated and function less effectively, entering a cycle of skin dryness.

BIO-AVAILABLE: Amount of a substance that becomes available (reaches the target organ or systemic circulation) to an organism's body for bioactivity when introduced through ingestion, inhalation, injection, or skin contact.

BISABOLOL: Derived from Chamomile, it is a healing, anti-irritant, anti-inflammatory and anti-microbial agent.

BOTANICALS: These are cosmetic ingredients derived directly from plants, and generally not undergone chemical processing.

BOVINE: cow derived

CANADIAN WILLOW HERB EXTRACT: This extract comes from Northern Canadian Prairie plants. It is a free radical scavenger and contains molecules with anti-irritant, anti-oxidant and anti-inflammatory properties.

CELLULAR FUNCTION: Cell metabolism is the process by which individual cells process nutrient molecules. Cells are capable of synthesizing new proteins, which are essential for the modulation and maintenance of cellular activities.

CERAMIDES 2: These make up the bulk of the lipid layer which holds the skin's cells together in a firm, smooth structure. They maintain the moisture retention ability of the skin. A decrease in the level of ceramides results in the skin becoming dry and hard, leading in turn to fine lines and wrinkles. If the body loses its ability to supply ceramides, then skin loses its structure and texture.

CO-ENZYME Q10: Large molecule known to be an anti-oxidant (also known as ubiquinone). Levels of Co-Q10 in the skin vary depending on age. Optimum in the twenties, it soon decreases after thirty, resulting in a lesser ability to produce collagen, elastin, and other important skin molecules. Co-Q10-depleted skin may also be more prone to the damage by free radicals, which are particularly abundant with exposure of the skin to the elements. Thus, Co-Q10 may boost skin repair and regeneration.

COLLAGEN 1 - Type-I collagen is the most abundant collagen of the human body. It is present in scar tissue, the end product when tissue heals by repair. It is found in tendons, the endomysium of myofibrils and the organic part of bone.

COLLAGEN 2 - Type-II collagen is the basis for cartilage (joint, ears, nose). It makes up 50% of all protein in cartilage and 85-90% of collagen of articular (joint) cartilage. Type II collagen does form fibrils, fine fibers, such as a muscle or neural fibers. This network of collagen allows cartilage to provide tensile strength to the tissue.

COLLAGEN: It is a key structural protein component that gives skin its structural firmness. It is damaged by factors, such as free radicals and UV light, which can lead to premature aging with poorer skin tone and texture and loss of firmness. It is also subject to intrinsic factors of aging. As we age, damaged collagen is replaced less effectively and is of reduced quality. Collagen is produced by cells called fibroblasts, which are found scattered throughout the dermis. Thus, one important target of wrinkle prevention is to reduce collagen breakdown and increase its supply.

CRITHMUM MARITIMUM EXTRACT: This marine extract regulates sebum and helps stimulate cell renewal.

DESQUAMATION: This is the shedding of the outer layers of the skin, the natural process in which skin cells are sloughed away and replaced.

DNA DAMAGE: Normal metabolic activities and environmental factors such as UV light can cause DNA damage. Many of these lesions cause structural damage to the DNA molecule and can alter or eliminate the cell's ability to transcribe the gene that the affected DNA encodes. DNA cannot be replaced if lost or damaged beyond repair. To reduce DNA damage, avoid environmental damage, such as cigarette smoking and over exposure to the sun, and also keep antioxidant reserves as high as possible.

ECTOIN: This is a multi-functional active substance derived from halophilic bacteria (living in salty environments). Protects the skin's immune system and cells by inducing faster formation of heat-shock proteins under stress. Reduces the formation of sunburn cells. Protects against photo-aging. Preserves and boosts the moisture content of the skin.

ELASTIN: It is a protein that accounts for the elasticity of the skin. Elastin functions in connective tissue together with collagen. Whereas collagen provides rigidity to connective tissue, elastin provides elasticity.

EMOLLIENT: This is a moisturizing agent.

ENZYME: a large biological molecule responsible for the thousands of metabolic processes that sustain life. They are highly selective catalysts, greatly accelerating both the rate and specificity of metabolic reactions, as in the synthesis of DNA. Most enzymes are proteins.

EPIDERMIS: It constitutes the outermost layer of the skin.

EXTRACELLULAR MATRIX: This is the outside part of a cell, made of tissues that provide structural support to the cells.

FREE RADICALS: Our cells use oxygen to produce energy. In the process, they generate free radicals-unstable oxygen molecules. Free radicals are also produced by sunlight, stress, toxins, such as pesticides, cigarette smoke and air pollution. Free radicals can damage every part of a cell. The result is that free radicals sap our skin of its youthful appearance.

GAGs: Glycosaminoglycans (GAGs) are produced by the body to maintain structural integrity in tissues and to maintain fluid balance. Hyaluronic acid is a type of GAG that promotes collagen synthesis, repair, and hydration. GAGs serve as a natural moisturizer and lubricant between epidermal cells to inhibit the production of matrix metalloproteinases (MMPs).

GLUCOSAMINE: This is a skin brightener.

GLYCERIN: An effective natural moisturizer at low concentrations; glycerin is a humectant, and at higher concentrations attracts moisture from the environment. Helps c o n d i t i o n the skin.

GLYCOSAMINOGLYCANS: These inhibit matrix metalloproteinase (MMP) enzymatic activities that gradually destroy the skin's collagen network.

GROWTH FACTORS: These refer to a naturally occurring protein capable of stimulating cellular proliferation and cellular differentiation. Growth factors are important for regulating a variety of cellular processes. They are considered messaging molecules.

HFCM: Human fibroblast conditioned media (neo-natal skin cells)

HMSC CULTURED MEDIA: Human mesenchymal stem cell cultured media (bone marrow cells)

HUMECTANT: This is a moisturizing agent that can attract moisture to the skin.

HYALURONIC ACID: This is the major component of the skin where it is involved in tissue repair. When skin is excessively exposed to UVB rays, it becomes inflamed (sunburn) and the cells in the dermis stop producing as much hyaluronic acid and increase the rate of its degradation. Found in high concentrations in the skin. Binds to water and provides volume to easily fill in larger folds of skin around the mouth and cheeks.

HYPER PIGMENTATION: This is the darkening of an area of skin caused by increased melanin and usually over exposure to the sun.

INFLAMMATION: This is the complex biological response of vascular tissues to harmful stimuli, such as damaged cells or irritants. It is a protective attempt by the organism to remove the injurious stimuli as well as initiate the healing process for the tissue. It is a short-term process which is characterized by the classic signs of inflammation - swelling, redness, pain, heat, and loss of function.

LACTIC ACID: A member of the Alpha Hydroxy Acids (AHA) family, lactic acid is derived from milk and when fermented, becomes a powerful but gentle exfoliating ingredient. Because of its ease of skin penetration,

LIPID BI-LAYER: The most successful commercial application of lipid bilayers has been in the use of liposomes as delivery system for active skin care ingredients.

LIPOPEPTIDE: This has a collagen stimulating property. Functions like growth factors but the peptides are much smaller so it penetrates the skin more easily. They are better than standard peptides because lipid addition allows for better absorption by the skin.

LIPOSOMES: These act as a delivery system. Most useful for being able to transfer and deliver active ingredients to the application site of cosmetics. The liposome wall is very similar, physiologically, to the material of cell membranes. When a cosmetic containing liposome is applied to the skin, for example, the liposomes are deposited on the skin and begin to merge with the cellular membranes. In the process, the liposomes release their payload of active materials into the cells. Consequently, not only is delivery of the actives very specific--directly into the intended cells--but the delivery takes place over a longer period of time. Liposomes are typically manufactured from various fatty substances that are used to encapsulate, or to create a sphere around, cosmetic materials.

MAGNESIUM CRYSTALS: These slough off dry skin, improve skin texture, and help combat stress and fluid retention.

MANGO BUTTER: It has beneficial moisturizing properties and acts as a mild lubricant for the skin.

MATRIX METALLOPROTEINASES (MMP): Those enzymes break down other proteins into recyclable fragments. They tend to predominantly digest the proteins found in the Extra Cellular Matrix. MMPs recycle skin matrix and specifically the structural proteins collagen and elastin. The smoothness, firmness and youthfulness of your skin depend to a large degree on the condition of its matrix, which depends on the balance of matrix synthesis and breakdown/recycling. If breakdown/recycling stops, damaged matrix will accumulate, leading to skin imperfections. MMP levels tend to increase as we age. Inflammation, irritation, and environmental factors may also elevate MMP levels. Inhibiting or suppressing elevated MMPs down to normal levels should be a part of optimal skin rejuvenation.

MATRIXYL 3000: This agent lifts and firms the skin, significantly reducing the appearance of wrinkles.

MDI Complex: MDI Complex[®] is an active cosmetic ingredient that inhibits collagen destruction by matrix metalloproteinase (MMP) enzymes. It inhibits collagenase (one of the MMP's) that destroys the skin's collagen network.

MELANIN: This is a skin pigment (substance that gives the skin its color). Dark-skinned people have more melanin than light-skinned people. Melanin also acts as a sunscreen and protects the skin from ultraviolet light. Melanin is produced by cells called melanocytes. It provides some protection against skin damage from the sun, and the melanocytes increase their production of melanin in response to sun exposure. Freckles, which occur in people of all races, are small, concentrated areas of increased melanin production.

MICA: This is a natural shimmer pigment that reflects light. Used in eye creams to improve dark circles.

MICRODERMABRASION: It is a cosmetic procedure in which the stratum corneum (dead outermost surface of the skin) is partially or completely removed by light abrasion. Microdermabrasion is used to remove sun-damaged skin and to remove or lessen scars and dark spots on the skin.

MICROSOME: same as a nano some (see nano

MMPs: Matrix Metalloproteinases (MMPs) are enzymes activated by UV exposure or inflammation. MMPs contribute to the breakdown of collagen while inhibiting new collagen formation.

NANOSOME: a NANOSOME™ is a very small liposome, so small it is in the NANOMETER range. A NANOMETER is one billionth of a METER. A NANOMETER is 0.000000039 inches.

NIACINAMIDE: This is a derivative of Vitamin B3. It is an essential component of our diets to maintain healthy skin. Applied topically, Niacinamide is a highly effective ingredient for enhancing skin health, skin appearance and combating skin aging factors. It strengthens skin's moisture barrier, reduces appearance of fine lines and wrinkles, improves skin tone and texture and reduces appearance of hyper pigmented spots.

OCTINOXATE: It is a sunscreen that mainly absorbs UVB radiation.

OMEGA-6 CERAMIDE: It increases the cohesion of the layers of the skin. Increases the barrier efficacy and reduces inflammation.

O-PLACENTA™: ovine (sheep) placenta

OPTICAL DIFFUSERS: These are cosmetic powders that work by combining light emission and visible-light scattering properties. Shadowed areas of wrinkles are illuminated by the emitted light, and the light diffusion aids in reducing the appearance of wrinkles and other skin imperfections.

OXYBENZONE: It is a sunscreen that absorbs UVB radiation and some UVA radiation. Also called Benzophenone-3.

OXYSOMES: This is a liposome delivery system for Vitamin C and Vitamin E, which work synergistically to provide antioxidant protection, boost collagen synthesis, and even the skin tone. The liposome improves delivery by 85% over traditional vitamin C preparations.

PANTHENOL: This substance is readily converted into vitamin B5, which has been shown to help the skin to repair damage.

PARTHENOGENIC: A stem cell produced by chemically activating a human ovum (egg) and causing it to divide as if it were fertilized. Parthenos = virgin/ Genesis = birth.

PEPTIDES: These function as messengers in the skin, allowing the epidermis and dermis to communicate more efficiently. Peptides are made of amino acids. A protein is made of chains of polypeptides.

PHOSPHOLIPIDS: Phospholipids are a class of lipids that are a major component of all cell membranes as they can form lipid bilayer

PHOTO AGING: This is caused by cumulative detrimental effects (as wrinkles or dark spots) on skin that result from long-term exposure to sunlight and especially ultraviolet light.

PHOTOSOMES: These have a light activated enzyme activity They reduce UV damage to the skin

PLURIPOTENT: Not differentiated, capable of differentiating into one of many cell types.

POLYMERIC DELIVERY SYSTEM: It is a delivery system stabilizing high concentrations of retinol in formulations.

PSP: Processed skin cell proteins (fetal skin cells)

RETINOL: It is one of several natural forms of Vitamin A. Other forms of Vitamin A include retinal and retinyl palmitate. Vitamin A does not have much of a direct biological effect. It works via its active metabolite called retinoic acid. Only retinoic acid has direct effect on skin cells and can adjust their metabolism toward a more youthful state. Skin cells have the “equipment” (enzymes) to convert various forms of Vitamin A into retinoic acid. Indeed, if enough retinol are added to skin cells, the amount of retinoic acid in the cells noticeably increases. Increases cell turnover so dull surface cells are shed more quickly. It thickens the epidermis and improves texture, elasticity, and blood circulation. Helps normalize uneven cell growth.

ROXISOMES: They repair DNA damage from reactive oxygen species generated by UVA in sunlight. As we age, the ability to replenish the anti-oxidant capacity of the skin diminishes. Roxisomes contain a purified repair enzyme (glycolate) that recognizes the most common form of oxidative damage to DNA and initiates the repair process. The enzyme is delivered into the skin using the liposome technology. Roxisomes shorten the time of DNA repair from 24 hours to 2 hours.

SAFFLOWER OIL: It has a very high percentage of linoleic acid. It, therefore, helps to moisturize, nourish and restructure the skin.

SALICYLIC ACID: A oil-soluble beta-hydroxy acid and exfoliative agent, well-known as an anti-aging ingredient that enhances the rate of surface cell turnover and reduces the appearance of fine lines and wrinkles. It is also known as an anti-acne ingredient used to combat skin blemishes or within acne treatment products.

SATURATION: This is defined as the “layering” of retinol, anti-oxidants and vitamins to increase cellular stimulation and repair, thereby improving overall results.

SEBUM: This is skin’s natural oil.

SHEA BUTTER: Its oily qualities improve skin softness and suppleness which make it ideal for dry or sensitive skin care, winter sports products, and for body lotions and hand care products. In addition, Ultrapure Shea Butter can be formulated into capillary preparations to prevent and treat scalp dryness, and provide good lubrication for the hair, resulting in improved brilliance and manageability.

SILICONE: These porous granules are used to absorb, particularly in skin protecting creams. It enables the skin to be firm and appears to be brighter in complexion.

SOLINE: This improves the hydrolipidic barrier, restructures and moisturizes the skin.

SOMATIC CELL - One of the cells that take part in the formation of the body, becoming differentiated into the various tissues, organs, etc.

SPF PROTECTION: This is a Sun Protection Factor: a rating scale indicating how much time you can expose your skin to the sun before you will burn when using a particular sunscreen.

SQUALANE: It is a natural emollient that accelerates penetration, increases skin respiration and prevents water loss from the surface of the skin.

SRM: Selected Reaction Monitoring (assay for the EGFR protein). SRM, sometime also referred to as conditioned medium, from human MSCs (MSC-CM). (Human mesenchymal stem cells).

STIMULATION: It increases cell turnover. All cellular functions need to be activated with ingredients at high concentrations to provide repair and defense to external aggressors.

STRATUM CORNEUM: This is the outermost layer of the epidermis - this is the layer of skin we see and feel. The name is derived from the Latin "stratum" = "layer" and "corneum" = "horny" so stratum corneum = horny layer.

SUNFLOWER OIL: Those seeds are expressed to produce this light oil which is high in linoleic acid, Vitamins A, B complex, D, and E, as well as calcium, zinc, potassium, iron, and phosphorus, all components of healthy skin. The amount of linoleic acid in skin declines with age and can be stripped by harsh soaps and cleansers.

TELOMERASE: Enzyme that replaces bits of DNA known as telomeres. When a cell divides, telomerase rebuilds the end of the DNA. With most cell types, the DNA molecule gets shorter each time the cell divides. When the telomeres are gone the cell dies.

TITANIUM DIOXIDE: This is a physical sun blocking agent that work primarily by reflecting/absorbing ultraviolet light. It blocks UVB and short UVA. Titanium dioxide is less effective against long UVA.

ULTRASOMES: These enzymes (UV-endonuclease) are encapsulated in liposomes. They recognize UV damage to DNA and initiates repair to increase cell survival.

UVA: These are aging rays from the sun that may jeopardize the production of collagen and elastin.

UVB: These are burning rays from the sun that may create pain, swelling and redness.

VITAIN: This is retinol, normally highly reactive, stabilized within a liposome delivery system for protection from inactivation by intercellular water molecules. Delivered into the cell, retinol is metabolized into retinoic acid, which increases skin thickness, reduces fine lines and wrinkles, and builds collagen for skin support.

VITAMIN A: It helps maintain smooth, soft skin; protects against air pollutants and contaminants; improves skin elasticity, moisture content and suppleness; and helps reverse the signs of photo-aging. A lack of vitamin A can cause skin to become dry and hardened.

VITAMIN B5: It participates in the release of energy from carbohydrates, fats & protein; improves the body's resistance to stress; helps in cell building.

VITAMIN C ESTERS: These are composed of L-ascorbic acid (basic vitamin C) joined with a fatty acid called palmitic acid. Able to penetrate the thin cell membrane. Vitamin C Ester offers maximum protection against free radicals at the exact spot that they wreak the most damage-the outer portion of the cell.

VITAMIN E (tocopherol): This is a major anti-oxidant nutrient that retards cellular aging due to oxidation; supplies oxygen to the blood which is then carried to the heart and other organs; thus alleviating fatigue; aids in bringing nourishment to cells; strengthens the capillary walls prevents the red blood cells from destructive poisons; prevents dissolves blood clots.

ZINC OXIDE: This is a physical sun blocking agent that works primarily by reflecting/scattering ultraviolet light. It is not irritating and compatible with sensitive skin. In fact, zinc oxide is a skin protectant and anti-irritant, and is widely used in treating various forms of dermatitis/skin irritation, including diaper rash.
